

ALPINE COLLECTION

2017 - 2018

ROSSIGNOL

THE BEST GETS BETTER

From the guides of La Grave to the podium of the Freeride World Tour, the iconic **7 SERIES** has redefined freeride with an award-winning fusion of ultra-lightweight innovation and uncompromising performance. And now, after endless accolades, and the addition of our high-definition Carbon Alloy Matrix, freeride will evolve yet again.

Completely redesigned from tip-to-tail, the 100%, all-new 7 SERIES ushers in another era of Rossignol technical innovation: **Air Tip 2.0**. A new, reinforced 3D structure and fully-integrated Air Tip construction that's lighter, stronger, and designed to push the boundaries of freeride even further.

AIR TIP 2.0

A revolution by design – the 100% all-new, fully-integrated 3D construction is now lighter and stronger for more balanced performance from tip to tail. The visible internal reinforcement and fully-integrated design eliminates deflection and instability, delivering more concentrated power and energy throughout the ski. Reduced weight at the extremities keeps tips naturally afloat while ensuring ultra-light swing weight, effortless maneuverability, and enhanced ski control.

CARBON ALLOY MATRIX

Engineered for High-Definition power, stability, and grip, CARBON ALLOY MATRIX is a new generation of super fiber. The unique carbon and basalt weave with linear glass stringers supplies a finely-tuned fusion of uncompromising, titanal-like strength; dynamic, lightweight mobility; maximum vibration absorption; and a balanced flex from tip to tail.

LIGHT CORE

Our durable paulownia wood core construction reduces weight by 15%, supplying playful, ultra-lightweight agility and easy touring performance with no compromise to downhill power and stability.

POWDER TURN ROCKER

Designed for the deep days, our most progressive rocker/camber profile delivers an award-winning balance of confident versatility and effortless float. The blend of longer, lower tip rocker, tapered tail profile, and traditional camber underfoot allows easy steering, instant speed control and the power, energy, and grip to get you back to the lift.

CARBON ALLOY MATRIX

OUR BEST-IN-CLASS PERFORMANCE IN HD

Engineered to amplify the best on-snow behaviors, Rossignol’s ultra-lightweight Carbon Alloy Matrix injects the new 7 Series and Experience collections with ground-breaking, High-Definition energy, mobility, and strength.

A new generation of super fiber, Carbon Alloy Matrix integrates carbon fiber and basalt into an open diagonal weave, creating more elastic movement for dynamic mobility and uncompromising strength. Linear glass stringers absorb vibrations and add a balanced flex from tip to tail. The result is a finely-tuned fusion of damp, “planted-to-the-snow” edge grip and loose, playful maneuverability.

ROSSIGNOL ROCKER TECHNOLOGY

The right blend of rocker and camber depends on each skier’s preferred terrain and style of skiing. Rossignol offers three award-winning rocker profiles, each perfectly tailored to meet the demands of specific snow conditions, skier levels, and styles.

POWER TURN ROCKER

ON-TRAIL

- Smooth carving power and stability for high-performance on-trail skiing*
- 90% high camber; 10% low tip rocker
 - Explosive power and confident full-length edge grip
 - Quicker turn initiation for faster, more aggressive lines

AUTO TURN ROCKER

ALL-MOUNTAIN

- The most versatility in the broadest range of terrain and snow conditions*
- 70% high camber; 30% low tip and tail rocker
 - Power, energy, and edge-grip on groomed snow
 - Easier steering, carving, and speed control

POWDER TURN ROCKER

FREERIDE

- Maximum floatation in the deepest snow conditions and incredible versatility*
- 50% low camber; 50% progressive tip and tail rocker
 - Power, energy, and edge grip for groomed snow performance
 - Effortless floatation, steering, and speed control in powder

7-SERIES

FREERIDE

The best gets better. Completely redesigned from tip-to-tail, the 100%, all-new 7 SERIES ushers in another era of Rossignol technical innovation: Air Tip 2.0. A new, reinforced 3D structure and fully-integrated Air Tip construction that's lighter, stronger, and designed to push the boundaries of freeride even further.

The new 7 SERIES is freeride – reborn.

AIR TIP 2.0

- 100% new – lighter and stronger
- Fully-integrated, reinforced 3D structure
- Increased stability, reduced swing weight

CARBON ALLOY MATRIX

- Amplified energy and shock-absorption
- High-definition stability and edge grip
- Dynamic power and drive

LIGHT WOOD CORE

- Lightweight agility and touring performance
- Playful power and stability

POWDER TURN ROCKER

- Effortless float, steering, and speed control
- Power, energy, and edge grip for groomed snow performance

HERO RACE

Racing is in our blood. The apex of technical hard-snow performance, HERO supplies the podium-seeking power and precision of a World Cup race ski with more accessible flexes and turn radii for technical and race league skiers. Powerful, precise, and perfectly balanced, these carving machines deliver full-throttle, race-inspired downhill performance.

CASCADE TIP

FREESTYLE & TWEENER

Central to the progression of freestyle skiing, Rossignol FREESTYLE skis are designed with increased durability and versatility in mind. Smooth, easy spins and full-throttle boost for the biggest hits on the hill; accessible, entry-level constructions to go wherever your imagination takes you. Stomp the landing and see where it goes next.

CUSTOMIZATION

All models of ALLSPEED and PURE, with the exception of the T4 version are customizable.

Custom Optisensor T1 = Enhanced Precision
Custom Optisensor T2 = Precision & Comfort
Custom Optisensor T3 = Enhanced Comfort

CUSTOMIZATION PROCESS

Place the liners in a boot oven for 8 minutes at 176°F (80°C). Place the warm liners back in the boot shells, and have the customer step into the boots lightly tightening the buckles. Wait 12 minutes for thermoforming to take place at room temperature.

CUSTOMIZATION INDICATOR - PATENT PENDING

Key fit areas feature visible customization on the outside of the liner which becomes smooth as it begins to mirror the shape of the ankle.

ALLTRACK

SENSOR GRID

Unique grid positioning on upper and lower shells allows improved shell wrapping, reduces boot weight, and retains high-performance rigidity for power, precision and energy transmission.

EASY ENTRY INSERT

A softer plastic insert molded over the instep area allows easy opening of the overlap for more comfortable entry and exit.

2 ANATOMICAL LASTS

An award-winning fit available in 100 and 102mm lasts ensures an optimized fit regardless of foot shape.

100 mm
ALLTRACK PRO

102 mm
ALLTRACK

HIKE MODE WITH POSI-BLOCK

Ultra-durable extruded aluminum lever with attached pull-tab allows skiers to switch from SKI to HIKE mode, and vice versa, with ease. Just pull the lever and lightly flex the boot forward to engage or disengage.

Posi-block allows excellent range-of-motion for hiking and walking while retaining unprecedented downhill performance.

Hike mode

Ski mode

WTR COMPATIBLE

WALK TO RIDE rocker soles comply with ISO 9523 and provide additional walkability without compromising binding release and downhill performance. WTR soles are compatible with ISO 13992 Touring Bindings; WTR Bindings; and LOOK & Rossignol Dual WTR bindings.

ALLTRACK, ALLTRACK W, ALLSPEED, and PURE boots are compatible with WTR soles and standard Alpine soles (ISO 5355).

OPTISENSOR 3D LINER WITH THINSULATE™

Dual-density 3D molded padding in key fit zones and customizable liner provide a new level of optimized comfort, warmth, and support. More rigid material in the heel area guarantees increased support and precision. Anatomical ankle areas feature softer customizable padding which visually molds to each individual skier for absolute comfort in this sensitive area.

THERMAL INSULATION

The use of THINSULATE® and THINSULATE PLATINIUM® thermal insulation ensures optimized comfort and warmth.

3M Thinsulate Platinum INSULATION

A lightweight synthetic insulation that delivers increased warmth in damp and cold conditions for all-day comfort and warmth with advanced technical features including enhanced elasticity and odor control.

3M Thinsulate INSULATION

A lightweight synthetic insulation that delivers increased warmth in damp and cold conditions for all-day comfort and warmth.

SENSOR MATRIX

Unique grid positioning on upper and lower shells allows improved shell wrapping, reduces boot weight, and retains high-performance rigidity for power, precision and energy transmission.

HIKE MODE WITH POSI-BLOCK

Ultra-durable extruded aluminum lever with attached pull-tab allows skiers to switch from SKI to HIKE mode, and vice versa, with ease. Just pull the lever and lightly flex the boot forward to engage or disengage.

Posi-block allows excellent range-of-motion for hiking and walking while retaining unprecedented downhill performance.

Hike mode

Ski mode

EASY ENTRY INSERT

A softer plastic insert molded over the instep area allows easy opening of the overlap for more comfortable entry and exit.

104mm INTERNAL LAST

The new internal last features a wider forefoot, toe box, and ankle area while retaining a strong heel pocket for the generous all-day comfort and support.

OPTISENSOR LINER WITH WINTHERM®

Dual-density 3D molded padding in key fit zones and customizable liner provide a new level of optimized comfort, warmth, and support. More rigid material in the heel area guarantees increased support and precision. Anatomical ankle areas feature softer customizable padding which visually molds to each individual skier for absolute comfort in this sensitive area.

WINTHERM®

This active thermal insulation features a breathable micro-perforated aluminum membrane that reflects heat back towards its source for incredible temperature regulation, comfort, and warmth.
