DYNASTAR

WE LIVE SKIING, JOIN US

Born in the Chamonix valley, at the foot of the Mont-Blanc, DYNASTAR handcrafts skis for the world’s most committed skiers. We’ve ascended to new heights over our 50 year history – a history marked by iconic innovations, legendary athletes, countless podiums, and an enduring passion for adventure.

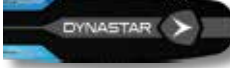

Chamonix serves as our base camp and home still today. We design, build, and test our skis amongst some of the most inspiring terrain in the world. Validate performance at the highest levels of the sport. And adapt our unique constructions and technologies to meet the needs of modern skiers everywhere.

We are driven to explore the limits of what’s possible on snow. Each day in the mountains embraced; every new challenge, a discovery. We find inspiration and solace amongst the bleached, wind-swept peaks of the mountains around us; their stories waiting to be intertwined with our own.

We Live Skiing. Join Us.

DYNASTAR'S UNIQUE ON-SNOW FEEL

LIVING TERRAIN, LIVING SKIING

THE FEELING OF BEING ALIVE, IT DEFINES OUR BEST MOMENTS ON SNOW,
THE SAME SENSATION WE BREATHE INTO EVERY SKI WE DESIGN.

In the early morning hours or at the close of the day, on a crisp winter morning in January or a quickly warming spring afternoon, we live in a constantly changing playground, the mountain conditions shifting and evolving right under our feet. The ability to adapt is the art of skiing; much like life itself. And it's this same spirit and sensation we breathe into every Dynastar ski we design.

The inexhaustible and perpetually changing terrain of the Chamonix valley offers a diversity of conditions that's unequalled. From on-trail to freeride to touring, the surrounding mountains offer unparalleled access to a variety of challenges, inspiring our vision of skiing on a daily basis.

We focus all of our imagination, and concentrate all of our energies on inventing the technologies and processes that allow us to design and develop skis that offer the right balance of agility, lightness, and power, whatever the terrain, whatever the practice.

AGILITY

LIGHTNESS

POWER

AGILITY

AGILITY IS ADAPTABILITY

The combination of balance, precision, and maneuverability, a skis agility frees the skier's movement – whether drifting or setting an edge, cushioning a landing, controlling speed and trajectory, to be adaptable you must be agile.

AT DYNASTAR, WE FOCUS OUR
IMAGINATION ON DESIGNING SKIS
THAT ARE **AGILE AND ALIVE.**

PRECISION

LIGHTNESS

LIGHTNESS IS SNOW FEEL

Lightness doesn't mean simply mean lightweight. It's the feeling underfoot enhancing fluidity on a big powder day, easing the climb while ski touring, and increasing quickness as you roll seamlessly from edge-to-edge.

DYNASTAR AND THE FACTORY TEAM CREATE NEW TECHNOLOGIES TO DEVELOP **LIGHTWEIGHT SKIS**

CARBON PLY

The best balance of lightness and elasticity

300g/m².

An ultra-lightweight diagonal carbon weave is specifically adjusted to ski width, allowing fibers to stretch and compress for a smooth, balanced flex with featherweight rigidity and grip.

Carbon fiber and fiberglass: 450g / m²
Fiberglass: 800g / m²

DYNACELL

Ultra-light aerospace material

100g/m³.

This aviation-grade, closed-cell PVC structure offers a high strength-to-weight ratio for increased energy, ultra-light shock absorption and stability.

Paulownia: 300g / m³ Light wood core used in freeride skis, hiking and women's
Poplar: 450g / m³ Traditional wood core used in junior race skis
Ash: 730g / m³ Traditional wood core for FIS and MASTERS skis

ACTIVE AIR CORE

New "Active Core" 17% lighter

370g / core

A new, lower density composition of polyurethane that offers substantial weight savings (-70g per core). Used alone, or combined with wood or microcell to reduce weight and enhance performance specific to the product.

POWER

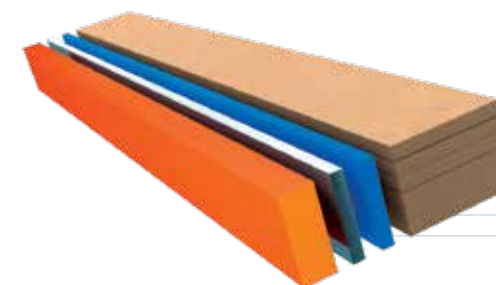

POWER IS PERFORMANCE

To excel and surpass, to compete with full confidence, a ski's level of performance is intimately linked to the power it allows you to harness. Smooth and precise, explosive yet stable. To perform at the highest levels of the sport.

DYNASTAR'S SIGNATURE TECHNOLOG UNLOCKS THE SKI'S NATURAL FLEX FOR GROUNDBREAKING STABILITY AND SNOW CONTACT.

POWERDRIVE RACE

Our Race Department developed POWERDRIVE construction features a full wood core and multi-layer (Ti | Visco | ABS) sidewall construction for unrivaled snow contact with elite-level power, precision, and response.

POWERDRIVE FREE

Our newest POWERDRIVE construction combines a traditional wood core and multi-layer (Visco|Wood|ABS) sidewall construction, delivering ultra-smooth versatility with enhanced playfulness in all snow conditions.

POWERDRIVE ACCESS

Combining our Active Wood Core construction and visco elastomer inserts, our POWERDRIVE ACCESS construction enhances shearing between core materials, providing a smoother, more natural flex for more comfort, precision, and control.

A legend isn't simply just born, it lives and breathes. It transforms over time to remain fresh and vital. It's an evolving narrative, a story that never dies. Over 50 years ago, in the legendary Chamonix valley, the story of Dynastar began. In the shadow of the Mont-Blanc, a path was forged, and our trailblazing identity took shape.

Today, over a half century later, like the iconic athletes who've led us here – from Freeride World Tour podiums, to the peaks of Alaska, to the powder choked trees of Japan – Dynastar continues to create its own path and redefine what's possible.

In 2018/19, the LEGEND returns.

The brand that introduced freeride to the world in the late 90's, challenges the status quo once again with a comprehensive collection of 'Free All-Mountain' skis – a category developed to meet the needs of modern skiers everywhere.

With LEGEND, there are no boundaries.

Today, the boundary between 'freeride' and 'all-mountain' is less visible than ever, and the needs of modern skiers demands a progressive new approach. Enter the LEGEND series. Smooth, instinctive snow-feel, dynamic power and playfulness, and ground-breaking stability – the next generation of legendary Dynastar performance is here. Featuring an innovative, lightweight Powerdrive construction, 5 point sidecut, our most versatile rocker profile, and a directional shape – from 106 to 75mm underfoot – Legend is designed to take you anywhere.

We work hand-in-hand, day after day, peak after peak, to handcraft skis that perform perfectly for each athlete’s objectives.

From the World Cup circuit to the Freeride World Tour to competitive ski mountaineering, Dynastar’s R&D department is focused on translating the demands of our Factory Team, anticipating their ultimate needs, and developing the technologies and designs that will drive alpine performance to the next level.

Immediately recognizable due to the Factory Team badging, each “Factory Team Approved” product is the result of Dynastar’s technical leadership and meticulous, handcrafted approach; a collaborative effort to conceptualize the innovations that will become the new performance standard of tomorrow.

VIVIAN BRUCHEZ EXTREME STEEPS SKIER

Every day is a gentle tightrope walk on the snow-capped peaks of Chamonix for Factory Team member, Vivian Bruchez. Vivian works closely with our engineers to develop high-performance skis with the best balance of lightness and precision.

RACHEL BURKS FREERIDE ICON

The “queen of stoke”, Rachel Burks has been a fixture in freeride for well over a decade, throwing her signature backflips while winning freeride comps like the Red Bull Cold Rush in 2012 and starring in films for Warren Miller, TGR and 2014’s all-female ski movie, “Pretty Faces”.

JF CHAPUIS SKICROSS CHAMPION

At 28, Jean-Frédéric Chapuis is one of the most successful champions in French sport. The Val-Thorens skier has successfully defended his World Cup crown for the past 3 years and worked closely with our engineers to develop our signature Powerdrive technology.

SOPHIE LECHASSEUR FREETOUR ADVENTURER

The ex-racer from Quebec is one of the newest additions to the Factory Team. Now residing in the Tarentaise valley in the heart of the French Alps, Sophie has been focused on climbing and exploring the vast mountains and terrain now her backyard.

RICHARD PERMIN FREERIDE ICON

One of the newest additions to Dynastar’s Factory Team, Richard has demonstrated courage and overcome pain in order to return to the front of the stage. A little more than a year after his serious accident, this modern freeride icon returns with his film “Sweet & Sour.”

REINE BARKERED FREERIDE CHAMPION

“The Ice Man” has been a consistent presence on Freeride World Tour podiums for the better part of a decade. Consistently able to ski mind-blowing lines in the most consequential terrain, like the Bec des Rosses, in 2012, Reine claimed the title of overall FWT Champion.

Developed for U16 to U8 athletes, JR RACE skis follow the same blueprint as World Cup race models with high-performance, discipline specific constructions, while featuring more appropriate flexes, sidecuts, and sizing options to propel tomorrow's World Cup champions to the top of the podium.

TWEEN

Developed with lighter weight, more user-friendly constructions, more forgiving flexes, and a wide range of size options, TWEEN skis encourage progression amongst young, up-and-comers and provide a solid platform for those just getting started to take their skiing to the next level.

JUNIOR

Featuring a specifically designed junior rocker profile, JUNIOR skis allow the smallest skiers on the hill to use changing terrain to their advantage, making learning to ski an easier, more intuitive process for faster progression and more fun.
