WINTER COLLECTION  
2018 - 19

# FEEL INNOVATION.

Thank you for making me set goals.  
For giving me something to strive for.  
Without you Limits, there would be no challenge.  
No tears.  
No triumph.  
Thanks to you, I grow and progress.  
Forging new paths beyond the  
boundaries you set.  
You force me to understand  
who I really am, by taunting me to  
push myself harder.  
Because you try to hold me back,  
I cannot be stopped.  
What's Your Limit?

WHAT'S  
YOUR  
LIMIT?

A black and white photograph of Howard Head, the founder of HEAD/TYROLIA, in profile. He is an older man with a mustache, wearing a dark suit, white shirt, and a patterned tie. He is looking upwards and to the left. In the background, several pairs of skis are visible, some with the HEAD logo. The overall tone is professional and inspiring.

At HEAD/TYROLIA, our passion is skiing. In 1950, Howard Head founded our company and radically improved the sport with his metal-laminate aerospace ski designs. Throughout the pages of this catalog, you will quickly discover that Howard's legacy lives on and HEAD/TYROLIA continues to push the boundaries of innovation beyond all others.

We are inspired by those who push themselves to drive the sport and create solutions to make our sport even better. Simply put, brilliant engineering results in revolutionary design. We say Thank You to each and every HEAD/TYROLIA employee, athlete, and most importantly to you, our valued dealers. Together, you're pushing the industry forward and inspiring more to become involved in the sport we all love.

When you have the *momentum* -  
What's Your Limit?

WHAT'S  
YOUR  
LIMIT?

# V-SHAPE

feat. LYT TECH

## THE LYT TECH MANIFESTO

When you engineer products using the lightest, strongest material on earth,  
when you continuously change and break convention,  
when you remove weight and complexity.

When you create, something focussed, something finely tuned,  
something reduced to its purest form. When you connect the dots,  
nothing comes between you and exhilarating performance.

## SKIING HAS NEVER BEEN SO MUCH FUN

By developing a ski collection with a super lightweight Karuba wood core and Graphene fully embedded throughout the whole length of the ski, we were able to increase the strength and durability while at the same time making it lighter. We added a unique weight distribution design that makes the tip and tail thicker and the middle section thinner. Additionally, we added ERA 3.0: Rocker, Radius, and Re-bound.

V-Shape LYT gives you effortless control for better steering and “carvability” as well as instant grip on the snow, more stability, and vibration dampening control. In other words, your day will be filled with smiles.

- 1 Top Sheet
- 4 Diagonal Glass fiber
- 7 Woodcore Karuba
- 10 Base

- 2 Glass fiber
- 5 Graphene
- 8 Sidewall

- 3 Carbon
- 6 Dampening Layer
- 9 Edge

**GRAPHENE** Integrating Graphene into the construction has two essential benefits: a reduction in weight and an increase in performance.

**KARUBA** Utilizing Karuba wood in the core gives you the perfect balance of density, durability, and weight.

**ERA 3.0** is a combination of technologies, shape and geometry in order to achieve effortless handling, more control and instant grip.

The difference is the taper ratio.

A bigger taper allows the skier to ski with less technique but also less power as the ski helps to initiate the turn and supports the skier at every movement.

A smaller taper ratio allows the skier to ski with more power for precise turn initiation and great stability.

# V-SHAPE COLLECTION

## THE V-SERIES

If there's one word to describe our brand new V-Series, one could say lightweight. Another phrase might be bad-to-the-bone. Either way, each V-shape ski embodies a unique, but diverse characteristic. For beginners, the technique-boosting V2 and V4 models enable easy, effortless turns. The V6, V8 and V10 provide increasing levels of power and precision with a focus on easy turn initiation with great stability.

### V10:

The V10 is made for advanced skiers who seek a light-on-weight ski that's heavy on performance. With a focus on frontside fun, this ski turns versatility up to ten.

### V8:

While light and tight-turning like a go kart, this ski packs the horsepower of a good 'ole Detroit V8. This perfect combination will take game-improvement seekers where they've always wanted to ski.

### V6:

If you seek a fun, playful all-mountain ski that'll keep up with you as you improve, then the V6 is just what the ski instructor ordered. Its focus is turning intermediates into advanced skiers.

### V4:

If you're graduating from renting, or perhaps want to take the leap into being a skier, the V4 will be a nice, easy companion. With a shape designed to make skiing easy, this ski might just be 4 U.

### V2:

Are you a never-ever who's turning into a skier? Maybe you've taken a few years off the snow. Either way, the V2 is ideal for you. This lightweight, easy-to-handle ski is also perfect for fast fun and fast improvement. Buy this enabler and you might just become a lifer...

# SKI TECHNOLOGY KERS

## THE EXTRA BOOST

KERS Technology works like a turbo charger that provides additional power and acceleration by stiffening the tail of the ski in outturns. The effect: a boost, catapulting the rider into the next turn, just like when Formula 1 pilots push a button for that extra notch of Speed. HEAD KERS Technology is an electronic, fully automatic and integrated system.

## TECHNICAL BACKGROUND

HEAD KERS Technology is an evolution of the idea behind HEAD's Intelligence™ Technology. But unlike Intelligence™, KERS does not influence the torsional stiffness of the ski, KERS empowers the skis' longitudinal flex. Also, KERS Technology is based on a completely new chip capable of accumulating power and keeping it in store for the right moment. Piezoelectric fibers transform kinetic energy into electrical energy which is stored in the embedded chip in the ski. Electrical energy is immediately released to areas of the ski, where additional energy is requested by the sensor. Timing and release are automatically controlled and coordinated. Depending on the flex pattern of different ski models, sensors are programmed beforehand: the more aggressive the ski has to be, the stiffer the tail will become.

Skis experience maximum flex at the end of a turn. At this moment an active microchip releases energy into the fibers of the tail. The tail of the ski then stiffens up, immediately increasing rebound for maximum acceleration at the end of the outturn.

# ELECTRONIC SKI MANAGEMENT SYSTEM

HEAD's theory of relativity: Ski performance is not an absolute measure. What you want out of a ski always depends on how and where you ride. On hard-packed slopes you want perfect edge grip. On soft snow, you want more maneuverability. Breaking the slope record you want your ski to perform differently than when you're just cruising with your friends or family. Adaptive HEAD Intelligence™ Technology helps your ski perform perfectly - both relative to terrain and your individual riding mode.

## HOW IT WORKS

Intellifibers positioned at 45° in front of the binding transform mechanical impulses into electrical energy. The harder you ride, the more energy is produced. The electrical energy is led back to the Intellifibers. This causes them to stiffen up, putting more rebound and torsional stiffness into the ski.

## WHAT IT DOES

Their 45° position in front of the binding increases the ski's torsional stiffness, pushing the edge into the snow in hard turns. Intelligence™ progressively stabilizes the entire ski at high speeds.

## THE EXTRA BOOST

Some HEAD high-end skis boast Intelligence™ Chip Technology. Here, the electrical energy produced by the Intellifibers is not just recycled, but accumulated and released bit by bit through a pre-programmed chip - individually timed to match the oscillation properties of the ski. Thus, the effect of Intelligence™ is multiplied, providing even more performance relative to your skiing style.

# KORE

A STORY OF INNOVATION AND DESIGN, LIGHTNESS AND STRENGTH, AND A NEW HORIZON FOR FREERIDE. LEADING WITH A SIMPLE CONCEPT THAT LINKS TO THE SKI'S USP AND RELATES DIRECTLY BACK TO OUR REASON FOR FREERIDING...PURE FRESHLY FALLEN POWDER.

## LIGHTNESS

The revolutionary construction has been topped with a polyester fleece instead of a standard top-sheet. This Topless Tech construction results in the lightest ski in its category. The triaxle weave of its carbon layer provides additional torsional rigidity for supreme responsiveness and solid edge hold.

## FLOTATION

The Graphene fused tip and tail allows us to reduce and redistribute weight throughout the ski. The thinner profile enhances flotation in soft snow and maximizes maneuverability.

## CONTROL

While the shock absorbing Koroyd gives the skier precise control in variable terrain, the ski provides strong torsional stiffness and great stability.

KORE 93

KORE 99

KORE 105

KORE 117

KORE is the most technically sophisticated freeride ski we've ever made. Here's why:

### GRAPHENE

GRAPHENE is the strongest, lightest material known to man. We fuse it into the KORE's tip and tail to make it lighter and more responsive in deep snow.

### KOROYD

KOROYD is a honeycomb shaped material at the heart of the KORE. It's super-light and incredibly elastic. It's strong and flexible and what makes the KORE special.

### KARUBA

KARUBA wood core is what gives the ski its pop and personality. It's the perfect ratio of density and weight. The advantages of combining Karuba, Koroyd, and Graphene enhance the ski, making it light and balanced.

INNOVATION IS ABOUT DISCOVERING WHAT IS TRULY NECESSARY. IT IS NOT A PROCESS OF ADDITION, BUT SELECTION. TAKE AWAY THE BAGGAGE, THE EXTRA WEIGHT. LEAVE ONLY THE PUREST. LEAVE ONLY THE CORE.

#TOTHEKORE

# JOY COLLECTION

THE SUPERLIGHT SKI THAT PACKS MORE ACTION AND JOY INTO YOUR DAY. THANKS TO GRAPHENE, THE WORLD'S LIGHTEST, THINNEST, AND STRONGEST MATERIAL, SKIING WILL NO LONGER BE THE SAME. THIS REVOLUTIONARY MATERIAL ALLOWS FOR LIGHTER SKIS WITH UNPARALLELED BALANCE AND CONTROL THAT WILL FILL YOUR DAY WITH JOY.

- |                      |                          |             |

## Light done right.

### LIGHTNESS

THANKS TO THE LATEST SUPER LITE AND SUPER STRONG MATERIALS

20 %  
LESS WEIGHT

### BALANCE

THROUGH UNIQUE WEIGHT DISTRIBUTION PROFILES

With GRAPHENE we are able to manipulate the geometric profile and weight distribution of the ski in any way we like. Depending on the nature of the ski model, the type of skier, and the expected snow conditions, we fine-tune weight and flex distribution characteristics to optimize the skiing experience. Never before has a ski been more perfectly balanced or more efficient – in every model of the size run. In our new women's line, each ski's weight distribution is set up for one of two categories: "on-piste" and "off-piste".

### CONTROL

WITH WOMEN'S CAMBER AND ERA 3.0

Thanks to GRAPHENE, our women's camber has a lower profile, which makes for easy turn completion and truly epic performance. And because the handling of the ERA 3.0 Rocker has been enhanced, it's not just the turns that are easier to execute – even changes from edge to edge are effortless. With GRAPHENE you always have grip and control – in every situation, through all conditions, with every move you make.

# SUPERSHAPE

FEEL INNOVATION. WITH GRAPHENE EMBEDDED IN THE SUPERSHAPE, YOU WILL ENTER A NEW DIMENSION OF SKIING. THE UNIQUE CHARACTERISTICS OF THIS NOBEL PRIZE-WINNING MATERIAL ENABLES A TOTALLY DIFFERENT CONSTRUCTION OF OUR HIGH PERFORMANCE SKIS. EXPERIENCE PERFECT EDGE, ACCURATE TURN INITIATION, AND ACCELERATION IN ALL CONDITIONS. THE SUPERSHAPE COLLECTION ALLOWS YOU TO STEER AND CHARGE WITH PERFECT WEIGHT/BALANCE DISTRIBUTION.

## WC SANDWICH CAP CONSTRUCTION

- |                          |                      |                   |
|--------------------------|----------------------|-------------------|
| 1 Top Sheet              | 2 Glass fiber fleece | 3 Titanal Layer   |
| 4 Glass fiber            | 5 Wood Core          | 6 GRAPHENE        |
| 7 Sidewall               | 8 Edge               | 9 Dampening Layer |
| 10 Reinforced Fiberglass | 11 Base              |                   |

GRAPHENE

## EFFORTLESS POWER

These skis have a core construction with a much larger woodcore. Due to the lightweight properties of GRAPHENE, we are able to use a thicker and wider aluminium sheet, which covers the entirety of the ski, ensuring a more reactive and powerful ride.

## BALANCE

With GRAPHENE positioned in the center of the ski, we have been able to reduce the thickness of the center and shift more material into the tip and tail, allowing for a ski with a truly harmonized flex distribution, easier engagement, and quicker edge-to-edge changes.

## CONTROL

Thanks to more material in the tips and tails, we have designed specific geometry for the shovel, which has a varying angle which ensures that the ski is constantly in contact with the terrain, no matter the angle.

**i.Speed** just wants to go faster. Clip in, hang on, and leave your comfort zone behind.

**i.Magnum** is a precision instrument for turning speed into fun. Go as fast as you want all day long.

**i.Rally** can do it all, so get creative. There's no such thing as ice too hard, powder too soft, or turns too tight.

**i.Titan** is a go-anywhere, shred-everything, multitasker. You'll need a snow cat to scrape the grin off your face.

## SHOVEL ILLUSTRATIONS

A smaller shovel radius means the front contact area of the ski moves forward and engages faster into a turn.

## GKC SUPERLITE SANDWICH CAP CONSTRUCTION

Developed with the most sophisticated material known to man, the Superlite sandwich construction uses Graphene, KOROYD and CARBON to guarantee the lightest ski in the world without compromising on performance. The ultimate construction for a high performing women ski.

<b>1</b> Top Sheet	<b>2</b> Reinforced glass fiber	<b>3</b> GRAPHENE
<b>4</b> Carbon glass fiber	<b>5</b> Koroyd	<b>6</b> Wood core
<b>7</b> Sidewall	<b>8</b> Dampening Layer	<b>9</b> Edge
<b>10</b> Carbon	<b>11</b> Base	

**GRAPHENE**

## GRAPHENE SUPERLITE SANDWICH CAP CONSTRUCTION

Thanks to the unique properties of Graphene, the Superlite Sandwich Cap Construction has had a reduction in the materials inserted with an increase in its responsiveness, allowing faster and more precise change from edge to edge. The ultimate ski for flotation and responsiveness.

<b>1</b> Top Sheet	<b>2</b> Glass fiber fleece	<b>3</b> Glass fiber
<b>4</b> Graphene	<b>5</b> Dampening Layer	<b>6</b> Wood core
<b>7</b> Sidewall	<b>8</b> Diagonal glass fiber	<b>9</b> Reinforced glass fiber
<b>10</b> Edge	<b>11</b> Base	

**GRAPHENE**

## SUPERLITE POWER SIDEWALL JACKET COMPOSITE CORE

To make this construction even lighter, material from the heart has been replaced by a lighter material and a layer of Graphene has been inserted to not only insure the performance is unchanged but actually increased, as the overall thickness of the core is reduced, making it a composite that is easy and forgiving, but always precise.

<b>1</b> Top Sheet	<b>2</b> Glass fiber	<b>3</b> Graphene
<b>4</b> Diagonal glass fiber	<b>5</b> Synthetic core	<b>6</b> Lite core
<b>7</b> Sidewall	<b>8</b> Edge	<b>9</b> Reinforced glass fiber
<b>10</b> Base		

**GRAPHENE**

# SKIS TECHNOLOGY I HEAD CORE

## WC SANDWICH CONSTRUCTION

A wood core sandwich construction with Titanal which combines the solid and responsive performance of the vertically laminated wood core and control offered by the Titanal.

## WOOD CORE CAP CONSTRUCTION

A vertically laminated wood core surrounded by a sock of fiberglass and the whole body is wrapped by a durable topsheet. This forgiving construction is ideal for ramping up the learning curve.

## SANDWICH CONSTRUCTION

Is the world cup sandwich construction with a Cap that wraps over the top edge of the sidewall to make the ski more suitable for all mountain skiing.

## POWER FIBER JACKET

This lightweight synthetic core construction is perfect for easy turns on an entry level.

# Rocker done right.

01

## ALLRIDE ROCKER

**A rocker who feels comfortable on the steepest slopes and deepest pow** - made for skiers who feel comfortable on steepest slopes and deepest pow, and who are always ready to make the best out of every single skiing day. Allride Rocker enables superior steering and increased floatation. We place exactly the right amount of rocker in each model to ensure maximum performance for all ability levels. Steering is easier for all skiers and soft snow versatility is enhanced.

02

## PNP ROCKER

**Some people want to fly high** - If you're one of them, be sure your ski features the PNP Rocker. Consider it a pair of wings for skis, developed in the HEAD freestyle laboratory. Our Park & Pipe Rocker incorporates tip and tail rise with regular camber underfoot. PNP gives skis a significant amount of pop and energy for boosting tricks. So dive in, go bigger, fly further, and rock the park and pipe as hard as you can.

03

## SPEED ROCKER

**For perfect handling on hardpack** - a slight tip rise on a ski with standard camber, which means great performance, easy turn initiation, and high versatility on soft snow. 10% rocker and 90% camber is just enough to take the sting out of the edges, while keeping the bite you need to turn. Speed Rocker turns HEAD performance skis into a weapon of speed with power steering. It's fast. Are you?

04

## TNT ROCKER

**For more powerful freeriding** - Tip & Tail Rise meet partial camber: The recipe for great float and freedom in powder with enough standing power to enjoy those days you didn't pray for snow. Really the best of both worlds. 40% Rocker is radical enough to satisfy the freeridin' soul. 60% Camber helps keep your speed and your budget in check - because with the versatility of TNT rocker, you'll have to buy one less ski for your quiver.

05

## JUNIOR ROCKER

**For perfect allride performance.** Kids don't like compromises. But they don't like sticking to decisions either. One day they're a rockstar. And the next day they want to be a bunny. With 20% rocker and 80% camber, kids get tons of float, easy turn initiation, and plenty of speed and control. HEAD's Junior Rocker simply works for anyone, anywhere.

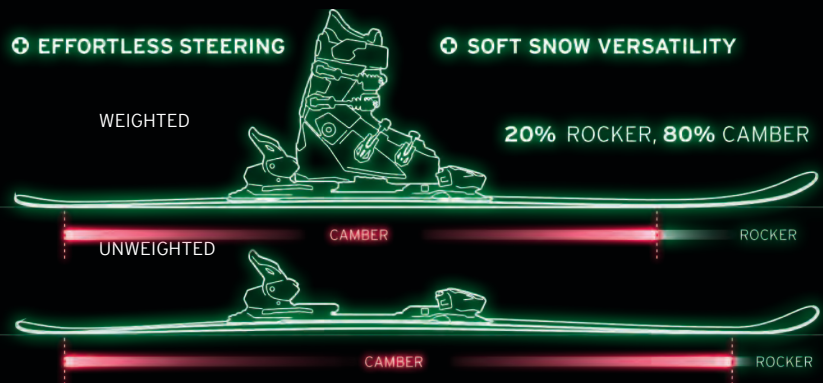

# SKI TECHNOLOGY | ERA 3.0

**era 3.0**  
EVOLUTIONARY  
ROCKER ARCHITECTURE

## ERA 3.0

Imagine a ski that performs for everyone, anywhere: One for all. All in one. HEAD ERA 3.0 is not your one-dimensional «Have a problem? We fix it!» technology. ERA 3.0 is a combination of technologies, shape and geometry. Think Rocker, think Radius, think Rebound. Think 3-dimensional.

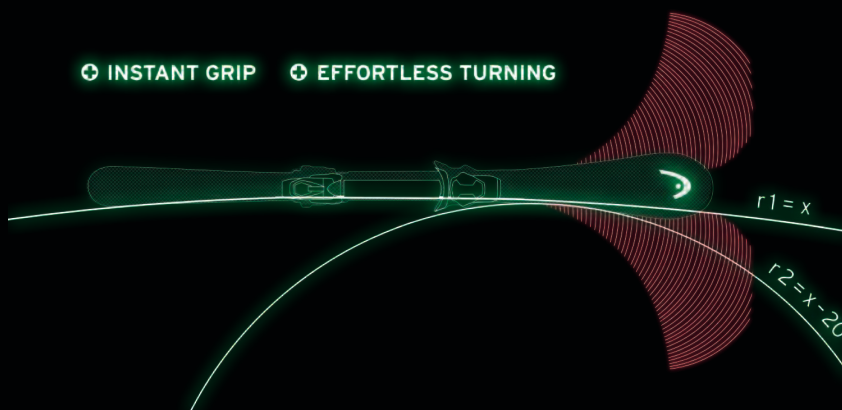

## ALLRIDE ROCKER

For superior steering and increased floatation. We place a highly targeted amount of rocker in each model to ensure maximum performance for all ability levels. Steering is easier for all skiers and soft snow versatility is enhanced.

## PROGRESSIVE RADIUS

For tremendous turning. Regular rocker makes skiers place their ski further on edge to have it touch from tip-to-tail. With progressive radius, up to 50 % less angulation is needed to enjoy full edge contact. More edge on the snow = more edge grip.

## INTELLIRISE REBOUND

For targeted stability. We move our legendary piezoelectric Intellifibers to the tip of the ski. The nasty tip vibrations found on regular rockers are not found here. These skis are too smart for that.

## ERA 2.0

THE LITTLE BROTHER OF ERA 3.0.  
It is everything ERA 3.0 has to offer as

far as design, performance and geometry integration, but without the addition of "Rebound" with its piezoelectric

Intellifibers. While we do want to see kids experience skiing performance at the highest level, they should have the best possible tools to learn and perform.

**2**  
era 2.0

# SKI TECHNOLOGY | FRAMEWALL

## FRAMEWALL

The extraordinary stressing of Park&Pipe skis generally result in fast abrasion and easy chipping of the top sheet. This problem has been solved by the all new FRAMEWALL. The three dimensional build of the side-walls covers the skis top sheet and prevents it from chipping and other external hazards, which results in delamination. The FRAMEWALL is the first 360 protector on a ski, that increases the skis durability and performance considerably!

## FREEFLEX EVO

Freeflex EVO reduces the impact on the natural ski flex to a minimum. Decreased forward pressure, completely redesigned new roller pincer systems and wings, plus an intelligent gliding element all add up to the rEVolution of racing: fastest time, from the starting gate to the finish line with Freeflex EVO.

## LOWER WEIGHT - MORE FUN

What is ideal: a lower weight or improved safety? This question is a thing of the past when it comes to choosing the perfect touring binding. Tyrolia's new AAAmbition AT binding combines both desired features by using the high tech material Carbon© in the mid part of the binding. Constant stability at a significantly reduced binding weight (200g) make the Tyrolia AAAmbition Carbon an AT binding with proven downhill performance and safety features. Its benefits of very low weight are highly valued when hiking and touring the back country.

Available in 3 Lengths: SHORT (265-295mm), MEDIUM (295-325mm) and LONG (315-345mm).

AAAmbition

# FORMED TO YOUR FOOT

100% CUSTOMIZABLE  
FIT SYSTEM

---

New FormFit plastics formulas hold stretches better than ever before for perfect comfort with improved balance and control.

Perfect fit is the new revolutionary system that ensures comfortable, performance-oriented customization in HEAD's superb skiboos.

---

HOW DOES IT WORK?

1.  
10 Minutes,  
Pre-heat the oven.

2.  
8 Minutes, 80°C,  
Place the boots into the oven to heat.

3.  
5 Minutes,  
Insert foot into the boot and allow to cool.

# LIQUID FIT

## THE REVOLUTIONARY CUSTOMIZATION SYSTEM FROM HEAD

The LIQUID FIT material provides the most precise and the quickest customization. The material's density ensures the perfect mold in the most critical area of the boot, the ankle and heel pocket. The performance and precision of a foam liner in 10 easy, comfortable minutes.

### 100% FLEXIBLE

You can add or remove material any time.

### 100% COMFORT

The incompressible material provides the most comfortable customization.

### 100% PERFORMANCE

The material's density is designed to increase the heel retention for supreme performance.

#### HOW DOES IT WORK?

1.  
Insert the tube into the liner until the RED mark meets the mark on the liner. Insert the liner in the shell.

2.  
Inject the liquid into the liner, following the instructions in the manual.

3.  
Stand in a skiing position, with knees flexed normally, for 1 minute. The customer can go skiing as soon as the process is complete.

Liquid fit case cod. 60120642

# THE NEW KORE

#TOTHEKORE

The new Kore Series of boots were designed to deliver lightweight, upward mobility with exceptional downhill performance. #TOTHEKORE

## NEW

### SUPERLEGGERA BUCKLES

The new light buckles: 90% aluminum, simple, effective and reliable.

### BUCKLE LOCK

Lock the buckle's bail in place for a secure fit while ascending.

### SKI-HIKE MECHANISM

45° Range of motion: provides strong, precise connection between upper and lower boot.

### LOW TECH INSERT

Dynafit certified.

### LIQUID FIT TECH + 3D PERFECT FIT LINER

The liquid injection technology provides a more precise and performance fit.

Pre-shaped, thermoformable ankle pockets, provide an anatomical and comfortable fit.

# THE NEW HEAD SOLES FOR VECTOR RS, NEXO LYT, AND ADVANT EDGE

## BETTER GRIP

High-profile slip-resistant sole

## WALKING COMFORT

Increased walking comfort and improved natural roll thanks to a curved rubber sole

## INCREASED VERSATILITY

No height adjustment needed for specific Grip Walk binding.

**GRIP WALK**

### COMPATIBLE WITH:

Alpine ski bindings with the additional Gripwalk marking and Bindings that accept alpine touring boots according to ISO 9523.

cod. 60120015 - Vector RS, Nexo, Advant Edge  
cod. 60120646 - KORE 1 G & KORE 2 G

**WALK SOLE**

### COMPATIBLE WITH:

Alpine ski bindings which are marked to work with Walk Soles or Walk to Ride soles and bindings that accept alpine touring boots according to ISO 9523.

cod. 60119545

## HEAD CANTING SYSTEM

### COMPATIBLE WITH:

Vector Evo, Vector Evo LYT, and Advantedge.  
cod. 60119552

Head offers the following solutions:

2.0°  
1.5°  
1.0°  
0.5°

**LIGHTNESS HAS NEVER  
OFFERED SO MUCH  
PERFORMANCE IN A  
WOMEN'S BOOT**

## A NEW CONCEPT IN WOMENS BOOTS

We have built a new and innovative boot designed for women. The new lightweight boot is designed for women with slim feet.

### LAST

- Women's Last: A unique fit and size profile optimized to suit women's foot anatomy.
- A comfortable fit due to a narrow heel with more comfort in the toe box.

### AUTO ADAPT TECH

Allows the calf of the liner to widen freely. The cuff can move into the space created by the adjustable profile, to comfortably accommodate all calf sizes.

### DOUBLE ADJUSTABLE PROFILE

A new design in the rear spoiler. The calf circumference can be increased by 1 cm. Rotate the 2 screws hidden under the rear part of the velcro. The low cuff and adjustable profile will eliminate calf pinch.

### EXTRA REAR SPOILER

Extra Rear Spoiler to increase performance.

### 3D LINER

Pre-shaped, thermoformable ankle areas, create an anatomical and comfortable fit.

### FUR LINING

This new fur lining makes the liner more comfortable and warmer.

### LIQUID FIT

PrimaLoft is a very lightweight, breathable material that provides effective thermal insulation.

# BOOT TECHNOLOGY

## RAPTOR AND VECTOR RS

### SPINEFLEX BUCKLES

Spineflex is a revolutionary buckle concept with a flexible element and a constant closure point. The flexible element allows the buckle to adapt to the shell profile and this provides a homogeneous foot wrapping independent from the degree of closure. The increased precision and comfort created from the absence of pressure points results in better performance.

# THE NEW VECTOR 98

HEAD DEVELOPED THE NEW VECTOR 98MM LAST FOR EXPERT SKIERS, WHO ARE LOOKING FOR A PRECISE FIT, AND HIGH PERFORMANCE.

## DYNAMIC FRAME SHELL

Modern skiing requires comfort, efficiency and control. HEAD's new EVO Frame is built around the legendary Vector last, but features a new highly efficient dynamic frame which directs 80% of the energy directed from the boot to the rear of the shell.

Forefoot area is less subjected to mechanical stresses but needs to provide the feeling on the snow. The Dynamic Frame has been designed to obtain the best sensitivity and the dynamic response of the boot sole when the ski is flexing.

## EVO STANCE

# POWER EFFICIENT DESIGN

## BETTER SKIING WITH LESS EFFORT

The HEAD design concept is inspired by the obsession to make skiing more fun, easier while using and with less energy. This is obtained by a naturally centered, and balanced stance, combined with a structure that maximizes the energy transmission to the skis.

### HI-TOP TECH

Direct contact between leg and shell provides the maximum energy transmission and ski control.

### DUO FLEX

The Duo Flex drivers enable a progressive and reactive flex with precise ski control through all phases of the turn.

### CONTROL FRAME

An innovative profile and two different materials provide a perfect synthesis of comfort, rearward support, and energy transmission.

## GO **GRIP WALK** WITH **TYROLIA**®

### EXTENDED GRIPWALK COMPATIBILITY IN THE TYROLIA SKI BINDING LINE.

The new TYROLIA range is dedicated to GripWalk compatibility. The entire adult performance segment (PowerRail, SuperLiteRail), the AAAAttack² all mountain range and the Sympro adult rental bindings are fully GripWalk compatible and can be used with adult Alpine ski boots (ISO 5355) and GripWalk ski boots (ISO 9523).

**TYROLIA IS OFFICIAL GRIPWALK PARTNER.**  
**BOOT SOLES FOR EASY, COMFORTABLE, AND SAFE WALKING.**

- GRIPWALK BINDINGS CAN BE USED FOR BOTH — ADULT ALPINE AND GRIPWALK SKI BOOTS.
- NO SPECIFIC GRIPWALK HEIGHT ADJUSTMENT IS NECESSARY.
- UNCOMPROMISING SKIING PERFORMANCE AND SAFE RELEASE-RETENTION SETTINGS WITH BOTH SKI BOOT SOLE TYPES.

## HOW TO RECOGNIZE GRIPWALK SKI BOOTS:

GripWalk logo printed on one side of the heel sole pad

GripWalk logo embossed in the sole pad

**GRIP  
WALK**

Compatible with TYROLIA  
GripWalk bindings (indication  
GW in product's name)

AAAttack² | PowerRail | SuperLiteRail Adult bindings (SLR 10 GW, SLR 9.0 GW) | Sympro Adult Bindings (SP 13 GW, SP 10 GW)

## HOW TO RECOGNIZE COMPATIBLE BINDINGS:

### 2018/19 – BOOT AND BINDING COMPATIBILITY

	ALPINE SKI BOOTS (ISO 5355)		TOURING SKI BOOTS (ISO 9523)		
	TYPE A (Adult)	TYPE C (Children)	 GripWalk (GW)	 Walk Sole / Walk to Ride (W)	no further indication
* marking can be found in the product name and partly also on the binding					
Binding without any indication*	●				
Binding marked „AC“	●	●			
Binding marked „GW“ 	●		●		
Binding marked „MBS“ 	●		●	●	
Binding marked „AT“ 	●		●	●	●

**ADVANTAGE:** The new GripWalk compatible models (PowerRail, SuperLiteRail and Sympro) don't need any further height adjustment to the boot sole type.

**ATTENTION:** The AAAttack² bindings don't need specific GripWalk or Alpine ski boot sole type adjustments. However, the metal AFD needs to be adjusted to the height of your ski boot sole to enable exact adaptation of the boot-binding-system, precise release values and re-centering of the boot.

## AAAttack<sup>2</sup> TECHNOLOGY

Skiers prefer equipment which provides control, performance, and usability. Not only for open slopes and untracked powder areas, but for park and half pipe rides.

The TYROLIA AAAttack<sup>2</sup> reaches the next stage in combining functionality and modern design to meet these demands. A perfect tool for all-around skiers who are willing to attack!

### THE NEW FR PRO<sup>2</sup> TOE

The next level to Access All Areas is reached with the new AAAttack<sup>2</sup> bindings. A new toe construction extends the possibilities of allmountain skiing: The new standard toe construction in the AAAttack<sup>2</sup> line – FR PRO<sup>2</sup> – is compatible with Alpine and GripWalk ski boots. The super secure 77mm metal Anti Friciton Device – AFD Metal – can be adjusted to Alpine Boots (Type A ISO 5355) and GripWalk Boots.

The AAAttack<sup>2</sup> 14 AT and the AAAttack<sup>2</sup> DEMO models can be adjusted for Alpine and Touring (T) ski boots, including GripWalk (GW), Walk Sole and Walk To Ride (W) ski boots. With these bindings, boot-binding compatibility issues during demo or in rental become things of the past.

GW: suitable for Alpine (A) and GripWalk (GW) Ski Boots

AT: suitable for Alpine (A) and Touring (T) ski boots, including GripWalk (GW), Walk Sole and Walk To Ride (W) ski boots.

Basically, there is an ideal binding model within the AAAttack<sup>2</sup> line to fit your ski boot.

## SAFETY FIRST

To increase the safety and performance aspect of the new AAAttack² bindings, a new release kinematic was developed to reduce friction and guarantee more constant release values. The interaction between the spring and tension element is designed as new system which significantly reduces friction for even more precise and constant release values.

The top models, AAAttack² 18X GW and AAAttack² 16 GW feature the Race Pro Heel with a reduced stand height of only 17mm. The AAAttack² 13 and 12 have the lighter Race Heel. The AAAttack² 11 models feature a modified solid SX Heel construction and reduced weight for optimal all-mountain performance.

## PERFECT INDIVIDUALITY

These fired up all-mountain binding models are available in different DIN settings for different demands. With regards to their clear design and compact measurements, the AAAttack models can be used on skis from 80mm widths onwards. Some models are available without brakes. This gives riders the opportunity to customize the setup to their needs. Brakes are available in different widths: 85/95/110/130/150mm.

Whatever you want - freeski, powder, park, pipe, slope - the tool to access all areas.

## ADVANTAGES OF ADJUSTING THE AFD

Adjusting the height of the AFD according to your ski boot sole height has many advantages for your customer and your shop/fleet:

- 1 Exact adaptation of boot-binding system
- 2 Better performance on skis
- 3 Precise release values and re-centering of the boot
- 4 More precise values at the pre-season and in-season inspections and less deficient products

## THE TOURING BINDING

The TYROLIA AAmbition Alpine Touring binding is the perfect companion for all Alpine Touring Aficionados so that no terrain remains unattainable. We included every attribute of our high-performance alpine ski bindings in this Alpine Touring binding.

### ALPINE TOURING TOE

This Alpine Touring Binding features the exclusive TYROLIA Alpine Touring (AT) Toe which can be easily adjusted to alpine and touring boot norms. A 65 mm wide mechanical AFS gliding element secures constant release values also with rubber soles. In combination with two rollers this binding provides superior safety features with the rapid and exact boot re-centering that skiers expect from TYROLIA. As a result of its harmonious design, the TYROLIA AAmbition has a wider contact area which improves stability and provides a secure foundation for every skiing situation. Furthermore, its pivot is efficiently positioned right below the ski boot tip to ensure perfect force transmission and a tilt up to 90 degrees.

### EASY ADJUSTABLE TELESCOPIC TUBE

Additionally the AAmbition features a unique light-weight telescopic tube which offers an easy adjustment opportunity to different boot sole lengths. Thus, with only one binding model it is possible to cover the entire range of different sole lengths – from 260mm up to 350mm. Furthermore, with the setting of the telescopic tube and through the compact mounting, perfect binding positioning on your skis is improved and mid-point deviation is avoided.

## TYROLIA FREEFLEX

The TYROLIA approved Freeflex System, which interacts with the AT Toe, the telescopic tube and the AT Heel, offers natural dynamics, excellent downhill performance and therefore a supreme ski touring experience.

## ALPINE TOURING HEEL AND CLIMBING AID

The state-of-the-art designed climbing aid is positioned as close as possible to the Alpine Touring (AT) Heel. This provides better walking balance and effortless climbing in all situations. The low stand height of 38 mm improves stability and offers a confident stance. With four different climbing aid positions (climbing in a 0°, 5°, 10° or 15° position) it is possible to adapt on different terrains without stepping out of the binding. It does not matter if it is a walk through flat terrain or a steep slope up to the summit. Simply use the ski pole in order to change the climbing aid position and also to lock for the downhill ride.

## CRAMPONS

Additional crampons are available as spare parts in widths of 90 mm, 105 mm and 120 mm, and provide safe climbing and a secure stand in any situation.

- 90 mm: A. No.: 163006 (1 pair)
- 105 mm: A. No.: 163007 (1 pair)
- 120 mm: A. No.: 163008 (1 pair)

## DEMO AND RENTAL SUITABLE

In order to offer ambitious sportsmen an opportunity to widen their horizons, the TYROLIA AAAmbition is also demo and rental suitable: Combined with a spare demo track, the TYROLIA AAAmbition Alpine Touring binding can be tested and shown to a broad audience. Only two easy adjustments (one on the telescopic tube and one on the demo track) are required to fit to different boot lengths without extra drilling. A. No.: 163001

◀ 90mm ▶

## BRAKES & INDIVIDUALITY

Considering the different ski widths, the TYROLIA AAAmbition comes without brakes. This gives you the opportunity to either choose the perfect fitting brake out of four different widths (85 mm/95 mm/105 mm/125 mm) or simply to ride and hike without brakes using appropriate powder straps - TYROLIA AAA-Series Powder Strap (1 pair): A. No.: 162981 Additionally available: TYROLIA AAA-Series Powdercord - A.No.: 163025

To sum up: The TYROLIA AAAmbition Alpine Touring binding is what every ski touring fanatic was looking for. On one hand it offers freedom and individual adjustment possibilities and on the other hand it provides the premium high-end performance that is expected from the world market leader TYROLIA. The solid, lightweight construction and its maximum functionality enhances the ultimate mountain experience for ambitious climbers as well as for touring newbies. Overcome boundaries – Access All Areas!

# DRENALIN

## THE PERFECT ALL-AROUNDER

With the AAAadrenalin Freeride binding from TYROLIA, no terrain is out of reach. This binding provides a level of skiing performance never before seen in an alpine binding. It combines performance driven freeride features with the ultimate ergonomic walking mechanism for maximum freedom on- and off-piste. Overcome boundaries smoothly for a perfect ride.

The TYROLIA AAAadrenalin binding is a perfect option for freeriders who prefer precise downhill control combined with ideal mechanics for short walks to reach untouched paths for a memorable ski experience. Designed together with freeskiers and backcountry skiers, this member of the TYROLIA AAA-Series is designed for ski widths from 80 mm and wider. The TYROLIA AAAadrenalin brings paramount freeride performance in every terrain, on every slope.

### FREERIDE (FR) PRO TOE

The TYROLIA AAAadrenalin comes with the Freeride (FR) Pro Toe with its ergonomic pivot position for optimal tilt up movement up to 90 degrees. This system provides effortless walking over short distances.

The FR Pro Toe is adjustable by changing the position of the Anti-Friction-Slider (AFS Metal) to cover alpine and touring boot norms. This 68 mm wide slider plus a stainless steel gliding element provide constant release values and result in a broader contact area to the ski boot sole.

The benefits: more stability, more direct power transmission and an ultimate skiing performance.

### FREERIDE (FR) PRO HEEL

The ultra-wide 80 mm heel track makes all the performance difference needed to take this product over the top. Extra width and the superior kinematics of TYROLIA's high performance bindings make it absolutely stable and reliable for perfect force transmission and unmatched performance. The heel can easily be adjusted to different boot sole lengths without any additional tools.

It covers a wide range of seven ski boot sizes. The TYROLIA AAAadrenalin Freeride binding is available in two lengths:

- SHORT (S) for ski boot sole length of 270–330 mm
- LONG (L) for ski boot sole length of 300–360 mm

◀ 60mm ▶

## AAA-ASCENDER LOCK AND CLIMBING AID

To Access All Areas, transition from skiing to hiking is incredibly fast, easy and convenient. Simply use the tip of the ski pole without stepping out of the binding to move the highly visible Ascender Lock to change between hiking and ski mode.

Another TYROLIA feature is the possibility to walk in the 0° position. After release, TYROLIA's climbing aid can easily be operated with a ski pole and it can be positioned in three different angles (0°, 7° and 13°) for an optimal walking position. This improves balance and a secure stand on your way to perfect skiing spots.

## CRAMPONS

Additionally, TYROLIA crampons (available as spare parts in three widths: 90 mm, 105 mm and 120 mm) can be mounted to improve grip in steep and icy terrain.

- 90 mm: A. No.: 162977 (1 pair)
- 105 mm: A. No.: 162978 (1 pair)
- 120 mm: A. No.: 162979 (1 pair)

## FREEFLEX

The platform of TYROLIA's AAAAdrenalin binding provides the approved TYROLIA Freeflex function which allows the ski to flex as it is designed to do so it can retain its natural dynamics. Freeflex is enabled by the free gliding plate that runs within the titanal heel track and is supported by the center of rotation of the binding toe.

## BRAKES & INDIVIDUALITY

The TYROLIA AAAAdrenalin comes without brakes. This gives each freeriders the chance to choose the precisely fitting brakes with regard to the ski widths. The TYROLIA AAAAdrenalin bindings can be combined with brake widths of 85/95/110/130 [F] or 95/110/130 [B]

Additionally available:  
TYROLIA AAA-Series Powdercord – Art. No.:163025

Whether skiing downhill or bridging walking paths, the TYROLIA AAAAdrenalin Freeride binding gives adventures an unrivaled combination of skiing performance and all terrain versatility, providing easy Access to All Areas!

### FREEFLEX EVO 16

## TECHBOX CARBON

### LOWER WEIGHT - MORE FUN

What is ideal: a a lower weight or improved safety? This question is a thing of the past when it comes to choosing the perfect touring binding. Tyrolia's AAAMBITION 12 AT CARBON binding combines both desired features by using the high tech material Carbon® in the mid part of the binding. Constant stability at a significantly reduced binding weight (200g) make the Tyrolia AAAmbition Carbon an AT binding with proven downhill performance and safety features. Its benefits of very low weight are highly valued when hiking and touring the back country.

Available in 3 Lengths: SHORT (265-295mm), MEDIUM (295-325mm) and LONG (315-345mm).

### AAADRENALIN 16 AT

For a stable, versatile freeride experience with direct power transfer choose the AAAAdrenalin 16 - a revolution in freeski bindings, combining outstanding downhill performance with an ergonomic walking mechanism for short hikes.

# YOUR PERFECT MATCH

---

We believe there is more to a perfectly matching helmet than just a great fit. The perfect matching helmet is the one you don't even feel is there.

This can only be achieved by not only considering head size, but also individual shapes, needs and styles.

By finding the balance between those demands, we find the perfect matching product for our customers.

---

## SHAPE

Oval, square, round, heart. Heads can have all sorts of shapes. This means that just because two people have the same head size, the same helmet may not fit both perfectly. Our helmet range takes care of that fact, enabling you to find a perfect matching product for everyone.

---

## NEEDS

Not everybody who wears a helmet feels the need to race down a slope with 140 km/h, or to drop a 20 meter cliff - like our athletes do. Our range is designed to meet the requirements of professional athletes as well as the demands of a relaxed day on the slopes. From skiing to snowboarding, from big mountain to all mountain, from professional to beginner - we've got you covered!

---

## LOOK

Only because a product fits well, it does not automatically mean it also looks good - perfect match means more than just offering the correct size. Our helmet range is determined by different lines, which cater to oval and round face shapes as well as to wearers of prescription glasses.

# HELMET TECHNOLOGY

## RACE

Highest level of protection for extraordinary demand. Trusted by World Cup Rebels.

## T-SERIES

The tough ABS construction is tough in taking hits, paired with an urban, modern shell design.

## V-SERIES

Super light helmet construction, featuring adjustable ventilation with Venturi effect.

## VISOR

Unification of style, comfort and function. Prescription glasses can be worn under the visor.

## YOUTH

All our adult helmet technologies are also available in specifically developed kids models.

## FIT

The perfect fit of a helmet is vital to fulfill its protective purpose. To assure a perfect fit, we teamed up with Boa®. Their accurate size adjustment system combined with HEAD's liner technology adapts the helmet's fit to individual head shapes for a comfortable fit and maximum level of protection.

## COMFORT

The soft material of our liners adapts perfectly to the head and thus avoids any bruises and the unpleasant entering of cold air. Molded-in mesh zones let heat and moisture escape to the outside and, together with the ventilation system, ensure a comfortable head climate. Innovations like the Cantilever feature ensures a wrinkle-free size adjustment, adding extra comfort and increased fit.

## SAFETY

Our helmets fulfill highest safety standards for ski & snowboard helmets, taking into account the results of collision tests to ascertain dampening and puncture resistant qualities of the outer shell. This is why some of the world's best athletes trust our products.

### STIVOT RACE CARBON

Helmet of choice for our World Cup Rebels.

#### ARTICLE NUMBER

320037 Rebels

# T-SERIES

## DEVELOPED AND BUILT FOR RENTAL

### 4 COLORS + 4 SIZES

The all-new T-Series comes in four sizes, all featuring their own specific shell mold. This is especially important on smaller sizes, where weight and fit is crucial to assure the protective qualities of a helmet.

### COLOR CODED

Rental Color Coding allows shop staff to quickly and easily determine a products size and compatibility.

### SD+D COMPATIBLE

SD+D Compatibility means that a product is compatible with HEAD rental helmet storage systems. It allows safe storage, easy drying and leads to a longer life of products.

### RENTAL SIZE ADJUSTER

Rental Size Adjustment is super durable and provides quick and easy adjustability.

# OPERATOR ACTIVITIES

The Operator is the SUV of winter boots, fulfilling the new demands of a changing industry.

It can be used for all types of snow sport activities including snowboarding. This versatility is a huge benefit to consumers, professionals, and resort operations. Its extraordinary performance in cold conditions (standardized test up to  $-40^{\circ}\text{C}$ ), a vulcanized water proof design, and the proven BOA® lacing system for ease-of-use makes it the perfect boot for all activities in winter sports.

## LINING

The Firetech liner is an extremely cold resistant liner up to -40°C (-40°F), tested according to ISO 20877:2011. It combines the comfort of a winter boot with the performance of a snowboard boot. With having the tongue on the outside of the liner you can open it wide for a very easy entry and exit into the boot. An additional silver foil between the midsole and outsole of the liner reflects heat generated by the body back into the liner to keep your feet warm.

## LACING

The BOA® lacing system allows the boot to be fastened with the turn of a dial and loosened in a snap: No more fumbling with laces in the cold.

## CONSTRUCTION

The entire lower section of the boot is vulcanized using premium rubbers. This enables the lower part of the boot to be completely waterproof to keep your feet dry even when walking in wet snow for hours or stepping into a puddle. The boot is fitted with reinforcements in the toe and heel section and is combined with a slip resistant rubber sole, which makes it suitable for snowboarding and all sorts of snow sports activities.

## SOLE

The Supergrripper is designed for those needing grip and stability when walking and riding. The heavy profile rubber studs offer supreme grip on almost every surface. The arch well supports the foot and additional EVA inlays offer great cushioning and additional insulation.

# WE BRING YOU THE 4D RENTAL SYSTEM. PERFECT SETUP. MOST EFFICIENT.

We face each of our customers individually, cater to for their perfect setup when renting equipment. Having a positive experience when riding is the key driver to returning customers, no matter what age, gender, ability level or family situation they are – everyone has very own specific needs, which the HEAD 4D system and its wide product portfolio addresses. And all of that in even less time.

If you had to explain the all new 4D system with one word, it would be: Efficiency. But 4D also stands for functionality, reliability and innovation:

It is the first snowboard rental system with integrated color coding for boots, boards and bindings.

## DEVELOPED TO RIDE. BUILT TO RENT.

**DURABILITY:** less overall parts  
**DURABILITY:** no textiles = no abrasion  
**HANDLING:** SpeedDisc compatible  
**EFFICIENCY:** 4D compatible  
**SERVICE:** less spare parts needed  
**DESIGN:** modern, appealing look

## TECHNOLOGY FEATURES SKI

**ALLRIDE ROCKER:** Rocker that is equally at home on bulletproof snow as it is in powder. This profile uses early rise in the tip with regular camber throughout the rest of the ski. 20% rocker - 80% camber.

**DIECUT UHM C BASE:** This durable workhorse base material is dedicated to all country skiing. Diecuts are added for flare.

**E BASE BLACK:** Basic black never goes out of style, and it's always durable. Easy gliding is everyone's friend.

**ERA 2.0:** ERA 2.0 is the little brother of ERA 3.0 and is everything 3.0 has to offer as far as design, performance and geometry integration, but without the addition of "Rebound" with its piezoelectric Intellifibers.

**ERA 3.0:** A masterful blend of three independently important technologies to make the ultimate allcountry skis.  
ROCKER + RADIUS + REBOUND = ROCKER DONE RIGHT.

**ERA 3.0 S :** "Sports version" of ERA 3.0 with a multifaceted ski designed with race innovation and inspiration, yet now with the addition of Rocker, Radius and Rebound. Totally new skiing experience with 10% rocker and 90% camber.

**GRAPHENE-KOROYD-CARBON SANDWICH CAP CONSTRUCTION:** topless tech construction, triaxle weave of carbon layer combined with Graphene and lightweight Karuba and honeycomb shaped Koroyd make KORE lightest ski in its category

**HIGHLY TRANSPARENT UHM BASE:** A high-density, determinedly durable base that allows gorgeous graphic details to shine through. The perfect combination of fashion and function.

**INTELLIGENCE™ TECHNOLOGY:** Piezoelectric fibers that absorb vibrations at the speed of light. As you ski faster, the Intelligence™ stiffens the ski to increase stability. It adapts to where and how you ski.

**INTELLIGENCE™ CHIP TECHNOLOGY:** With Intelligence™ Chip Technology the electrical energy produced by the Intellifibers is not just recycled but accumulated and released bit by bit through a pre-programmed chip.

**ISS - INDEPENDENT SUSPENSION SYSTEM:** Elastomeric vibration killers located in the tip, tail and underfoot. The elastomers quiet the vibrations that are commonly associated with rockered skis. Underfoot, the vibrations are dampened to provide the skier with a smooth ride.

**JUNIOR POWER FRAME:** A geometric ski shape that provides structural strength to the outer edges of the ski through geometric design, as opposed to altering the core material or density of the ski. Also, for kids it looks cool and feels different than a standard flat ski.

**KERS:** A computerized piezoelectronic device that stores ski energy and releases it at the end of each turn. In reality, it's a turbo charger for your skis.

**LYT TECH CONSTRUCTION:** By developing a ski line with lightweight Karuba wood and Graphene fully embedded we were able to increase performance while making it lighter. A unique weight distribution makes tip and tail thicker and the middle section thinner. The V-shape gives you effortless control for better steering, more stability and control.

**PNP ROCKER:** Very subtle tip and tail rise with regular camber construction underfoot. PNP Rocker provides a rider a smother turn initiation as well as reduced edge contact to seamlessly butter into tricks and initiate spins. 30% rocker and 70% camber.

**POWER SIDEWALL JACKET:** An innovation in ski construction that combines the well known fiber jacket construction with ABS sidewalls. A lightweight ski with easy skiing performance including sidewalls for better dampening, shock absorption and edge grip. Performance at its best for its great target group.

**RACE STRUCTURED UHM C BASE:** The highest quality, fastest base and finish known to man. The technicians who build the skis for our World Cup Rebels use the same material and machines to put this scary fast base and structure into your skis.

**RD RACING TOP SHEET:** A thinner topsheet material designed to maximize responsiveness. Exclusive to our RD skis.

**REBEL CAMBER:** Some years ago it was years ago, it was rebellious to have rocker. Now, it's rebellious to have camber. With Rebel Camber, we feature explosive acceleration and excellent edge grip for the World Cup Rebel inside you.

**SANDWICH CAP CONSTRUCTION:** We take the basic framework from the world cup sandwich and place a cap that just wraps over the top

edge of the sidewall to make the ski more suitable for all mountain skiing. Bomber construction with a rounded top edge makes for one incredible allcountry ski.

**SANDWICH TWINTIP CONSTRUCTION:** We blend a full vertical laminate wood core for durability and add our bomber Independent Suspension System for killing chatter. Pipe, park, big mountains, whatever, bring 'em on and let this construction rip.

**STRUCTURED SURFACE:** An extra-durable topsheet with a structured exterior. Designed to hold up against the most extreme abuse.

**STRUCTURED UHM C BASE:** The same high quality material used in HEAD's world-leading race skis is used here. Different structured running base for all conditions.

**TNT ROCKER:** Tip and tail rocker combined with regular camber underfoot. This combination creates a surfy feel in powder while maintaining hard snow versatility. 40% rocker - 60% camber.

**TUFFWALLS:** Impact resistant ABS sidewalls. While maintaining responsiveness, Tuffwalls are designed to take a beating

**TWINTIP CONSTRUCTION:** A vertically laminated wood core, surrounded by a sock of fiberglass and covered by a durable topsheet. This forgiving twin tip construction is slightly softer than our sandwich twin tip layup, making it better for learning pipe and park tricks.

**UHM C BASE:** Our highly durable base material for getting the job done well. Not flashy, but steady and stable. The kind of base that will last for years.

**WOOD CORE CAP CONSTRUCTION:** A vertically laminated wood core, surrounded by a sock of fiberglass and covered by a durable topsheet. This forgiving construction is slightly softer than our sandwich cap making it ideal for ramping up the learning curve.

**WORLDCUP SANDWICH CONSTRUCTION:** The basic construction invented by Howard Head in the 1940's, perfected and hand built by the finest ski technicians in the modern world. The vertical laminate wood core is embraced by speedfreak phenolic sidewalls and the finest Titanal. This is the fastest construction on the planet. Period.

# TECHNOLOGY FEATURES BINDINGS

**ABS - ANTI BLOCKING SYSTEM:** The exclusive TYROLIA technology of the ABS continuous band allows the boot to move out of the binding almost without any friction, hence delivering maximum safety in case of icing up, dirt and boot wear.

**AFS - ANTI FRICTION SLIDER:** New weight optimized adapter for gliding insert at Power Bindings for reduced friction, constant release values and maximum safety.

**AFS JUNIOR:** The innovative mechanical Anti Friction Slider (AFS) automatically adjusts to the boot sole height, compensating A/C standards as well as height differences due to icing up, dirt or boot wear.

**AFS METAL:** The 68 mm wide slider plus a stainless steel gliding element provides constant release values and results in a broader contact area to the ski boot sole.

**AT - ALPINE TOURING:** these bindings are suitable for Adult Alpine (ISO 5355) and Touring ski boots (ISO 9523) including GripWalk (GW) , Walk Sole and Walk To Ride (W) ski boots.

**AT TOE:** The Alpine Touring (AT) Toe can be easily adjusted to alpine and touring boot norms and it secures constant release values also with rubber soles.

**BRAKES:** HEAD offers brakes with different width for optimal fit on wider skis and fat skis up to 150 mm ski width in the brake area. Some binding models are delivered without brake – “w/o brake” – to avoid brake exchange later on.

**CARBON TUBE:** Made of the high-tech material Carbon® , the Carbon tube reduces the weight of the AAAmbition 12 AT Carbon significantly.

**CLIMBING AID:** The climbing aid with its different climbing positions, which can be operated without stepping out of the binding, provides excellent balance and effortless climbing.

**FREEFLEX PRO:** Best performance enabled by the innovative Freeflex Pro System. The free-gliding heel allows the ski to bend through unimpeded and to retain its natural dynamics. Due to the reduced stand height, the Freeflex band is now much closer to the ski boot. Constant release values reduce the risk of injury and ensure safe ski steering.

**FR PRO TOE:** The Freeride (FR) Pro Toe can be easily adjusted to different boot sole heights. Its horizontal spring reflects the modern architecture of the AAA-Series.

**FR PRO2 TOE:** The FR Pro<sup>2</sup> Toe comes with a new release kinematic to reduce friction and guarantee more constant release values. It easily adjusts to different boot sole heights. The optimal height adjustment need to be tested with a testing device for exact adaptation of the boot-binding system and better performance on skis.

**FULL DIAGONAL:** Intelligent 180° release both horizontally and vertically of the Diagonal Toe and therefore ensures maximum safety in backward twisting-fall situations.

**GRIPWALK COMPATIBILITY:** Ski Bindings with “GW” in the product’s name are GripWalk compatible and can be adjusted to Adult Alpine (ISO 5355) and GripWalk ski boots (within ISO 9523).

**MBS:** MBS - Multi Boot Standard is a unique feature for the mass performance segment and accommodates Adult Alpine (ISO 5355), GripWalk and Walk To Ride ski boots (within ISO 9523).

**NX HEEL TYPES:** New 3-piece heel for easy step in and step out. Better stability and power transmission.

**RX-DIAGONAL HEEL:** The RX-Diagonal Heel provides maximum safety with a 150° release. Thus, pressure on the knee and ligaments upon twisting forward falls and the risk of injury are reduced.

**SLR + SLR II:** SLR bleibt + Zusatz: SuperLiteRail II: with the 2-piece SLR II base, weight was reduced significantly. Available in different length for different mounting positions: S, SM, M and L.

**SUPERLITERAIL SYSTEM:** In combination with the integrated Freeflex-Function the SLR Base provides better energy transmission without affecting the natural ski flex. During the turn, this SuperLiteRail Base guarantees constant force distribution which leads to flawless control, thus enhancing the on hill experience. The remarkable benefits include highly efficient and agile ski performance.

**RX TOE:** The performance oriented RX toe defines stability and power, much as a strong and tough bull would extremely durable and absolutely reliable.

**POWERRAIL:** The unrivalled technology for retail, demo & rental by the well-received rail system on a modular basis provides easiest handling, maximum flexibility, optimized performance, perfect match, more stability and durability.

**RACE DIAGONAL:** Diagonal Toe tuned for racing purposes. Due to its higher release force vertically than horizontally, it holds up to the high backward lean forces in racing.

**RACE LITE HEEL:** The lighter variant of the Race Pro Heel for young up-and-comers and speed stars of tomorrow.

**RACE PRO HEEL:** The stand height was reduced according to the actual FIS rules. An increased contact area reduces friction and provides constant forward pressure in all skiing situations.

**SX LITE HEEL:** Weight optimized toe for junior and light-weight skiers with proven safety features of the HEAD/TYROLIA binding technology.

**SOLID COLORED:** Solid colored plastic parts are not coated with a separate color layer. Instead, the color has been added to the plastic granulate already. Thus, those parts are absolutely scratch resistant and durable but less color options are available.

**SLR II BASE:** With the 2-piece SLR II base, weight was reduced significantly. The benefits: easier turns, less fatigue and more fun on the slopes! The base offers 3 different mounting positions to cover boot sole lengths between 199 and 347 mm.

**SX HEEL:** Based on new kinematics the ski boot is precisely secure in the binding. This ensures exact and more direct power transmission from boot to edge.

**SX JR. HEEL:** The new junior heel with improved kinematics to increase safety and performance for junior skiers.

**SX JUNIOR TOE:** The innovative kinematics of HEAD’s LX and SX adult line provide advantages in performance and stability for the SX Junior line for young speedsters as well.

**SX KID HEEL:** The SX Kid heel provides the little ones with the best in the latest technologies and safety standards for binding innovation and integrates the new kinematics for the younger set, too. Because safety is paramount, always.

**SX KID TOE:** With the SX kid toe for up-and-comers and integrated innovative LX/SX kinematics ski steering now requires even less effort.

**SX TOE:** The kinematic improvements are reflected in the product design of the SX toe as well. With its high cheek bones it reminds of a fox – smart, spry, agile and very clever.

**SYMPRO:** With the Rental Sympro bindings, the length of the toe and heel can be adjusted with only a few easy steps. For fast on-hill adjustment.

**SYMRENT:** With a mobile heel the Symrent bindings can be simply and very quickly adjusted to almost any size of boot.

**TEFLON WIDE:** The wide Teflon® insert ensures better force transmission, more stability and therefore optimal performance.

**TELESCOPIC TUBE:** With only one binding model it is possible to cover the entire range of different sole lengths (from 260 mm up to 350 mm).

**TRP - TYROLIA ROLLER PIN CER SYSTEM:** The TYROLIA Roller Pin-cer Toe System (TRP System) of the HEAD bindings with its four rollers and gliding inserts ensure a 180° release and exact centering of the ski boot. The TRP system reduces the load on knees and ligaments and improves performance considerably.

# TECHNOLOGY FEATURES BOOTS

## LINERS

**DOUBLE POWER BOOSTER VELCRO:** The strap of the Double Power Booster Velcro works as a double pulley for better closure and a tighter wrapping on the cuff. The elastic Booster strap allows more dynamic response on the boot. The result is more precise transmission and faster ski reaction.

**QUICK ENTRY LINERS:** These liners come with a unique easy entry construction in the fore foot. Developed both for skiing and walking, Quick Entry liners always feel extremely comfortable.

**PERFECT FIT (PF):** Perfect Fit is the revolutionary customization system that provides the best level of precision, comfort and durability. The Perfect Fit material allows the liner to adapt to your feet, ensuring maximum power transmission. 5 minutes of heating at 80 degrees, is all that is required, to make the lining adapting and get the perfect precision and comfort.

**HEATFIT (HF) LINERS:** Multi-component liners with moldable inserts in liner and tongue. 5 minutes of heating, is all that is required, to make the lining adapting and get the perfect precision and comfort.

**PRO LINERS:** Pro Series are thin and very supportive liners developed to assure maximum wrapping and extreme high performance. They come with a stretchy upper material, thermo-moldable ankle inserts and a rear sliding insert.

**AUTO ADAPT TECH:** Allows the calf of the liner to widen freely. The cuff can move into the space created by the adjustable profile, to comfortably accommodate all calf sizes.

## BUCKLES

### SUPERLEGGERA BUCKLE:

The new light buckles: 90% aluminum, simple, effective and reliable.

### DOUBLE POWER LEVER:

The Double Power lever reduces the effort needed to close the buckle by 50%. Developed and patented by HEAD.

**SPINEFLEX BUCKLE:** A revolutionary buckle concept with a flexible element and a constant closure point. The flexible element allows the buckle to adapt to the shell profile. The constant closure point increases the overlap between the shell flaps and reduces pressure points. The increased comfort and precision results in better performance.

**SPINE-TECH BUCKLE:** The Spine-Tech buckle features a constant traction closure point. This translates into a reduction in pressure points, an increased overlap between shell flaps, more comfort, and more precision.

### SUPERMACRO RATCHET:

An adjustable, ratcheted toothplate that provides 28 mm of calf-adjustment.

### WIDE-BODY BUCKLE:

Oversize buckle designed for an extreme ease of use. The fastest way to close the boot's cuff.

## FEATURES

### LIQUID FIT:

Material provides the most precise and the quickest customization. The material's density ensures the perfect mold in the most critical area of the boot, the ankle and heel pocket. The performance and precision of a foam liner in 10 easy, comfortable minutes.

### ADJUSTABLE REAR SPOILER:

Height adjustable spoiler increases rearward support as it's raised.

**DOUBLE ADJUSTABLE PROFILE:** A double mechanism in the upper rear part of the boot which adapts the circumference of the cuff up to 1 cm to fit individual anatomical needs. Located on the either side of the cuff's spine, this mechanism allows the cuff to adjust up to 1 cm to better fit the anatomical needs of skier.

**EASY ENTRY SHELL DESIGN:** Located in the throat of the boot, 4 channels are cut into the plastic to reduce the thickness of the material and thus provide smoother entry and better wrapping to the foot.

### POWER CONTROL FRAME:

Designed to reinforce the Cube 3 line shell structure in order to give more stability and performance to the boot

**CONTROL FRAME:** Specifically designed to reinforce the EDGE line shell structure, the Control Frame lands more stability and performance to the boot.

### BI-INJ. FRAME:

A high performance, multi-density shell that optimizes easy entry, foot wrapping, comfort and energy transmission.

**FLEX STANCE TUNING:** Screw mechanism with a plate support on the spine of the cuff. By adding the screw(s) the link between shell and cuff becomes stronger and the flex of the boot stiffer. It also works as a forward lean adjuster.

**FLEX TUNING:** A screw mechanism on the spine of the cuff that links shell and cuff. To get a softer flex, the screw(s) can be replaced by the plastic caps included in the box.

**INTEGRATED AUTOSKIWALK (ASW):** HEAD patented integrated device which automatically switches between skiing and walking position when stepping in or out of the bindings.

### SKI-HIKE SYSTEM:

Kore provide a 45° Range of motion: provides strong, precise connection between upper and lower boot.

**STIFFER/SOFTER FLEX ADJUSTMENT:** It's an adjustment placed on the spine of the cuff to select between a stiffer or softer flex depending on snow condition and level of skiing.

### SHOCK ABSORPTION WEDGE:

A rubberized boot board that allows for smoother riding over varied terrain and shock-free landings.

### FORM FIT:

100% customizable shell fit system. New Form Fit plastic holds modifications better than ever.

### DUO FLEX:

Enables a progressive and reactive flex with precise ski control through all phases of the turn.
