## AT LIBERTY DETAILS MATTER

Since 2003, Liberty Skis has been dedicated to the mountains and to the skiers who seek them out.

With our headquarters high in the Colorado Rockies, we are committed to crafting exceptional products that elevate your ski experience.

# BORN IN COLORADO

Located in the heart of the Colorado Rockies near the base of Beaver Creek and Vail ski areas, Liberty makes skis like our lives depend on it.

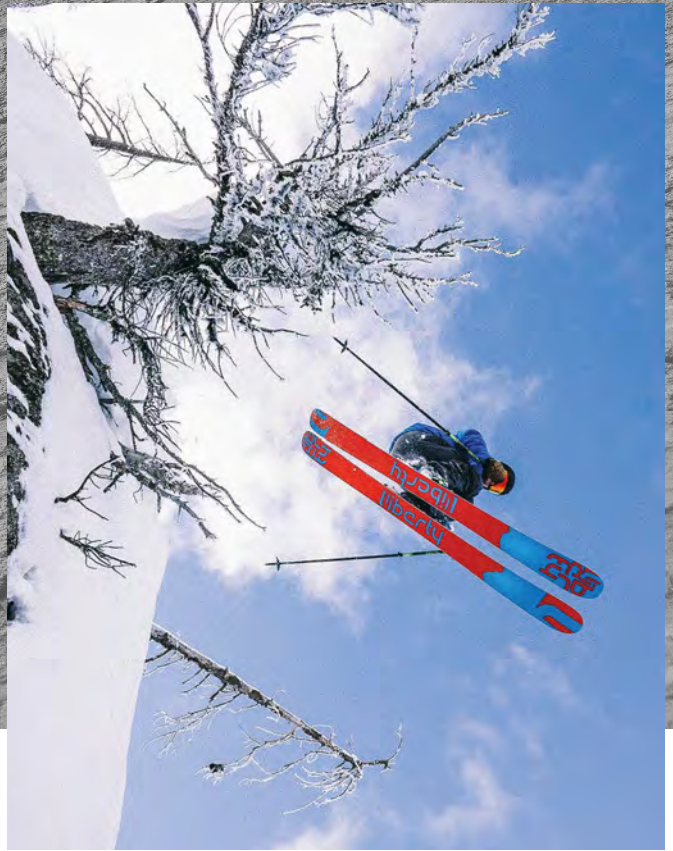

Since 2003, our home high in the mountains has informed everything we do. Our commitment to crafting exceptional skis and doing business the right way means we sweat the little stuff.

We test and refine our skis right in our backyard, dial in the construction, wrap them in beautiful graphics, and make sure they are available at the finest retailers, because these things matter to us and are inspired by our surroundings.

Whether it is carbon fiber, Vertical Metal Technology, or our signature bamboo laminate cores, Liberty is constantly applying functional innovation to make exceptional products.

LIBERTY SKIS 2023

LIBERTY SKIS 2023

*At Liberty, we make skis like our lives depend on it, because they do.*

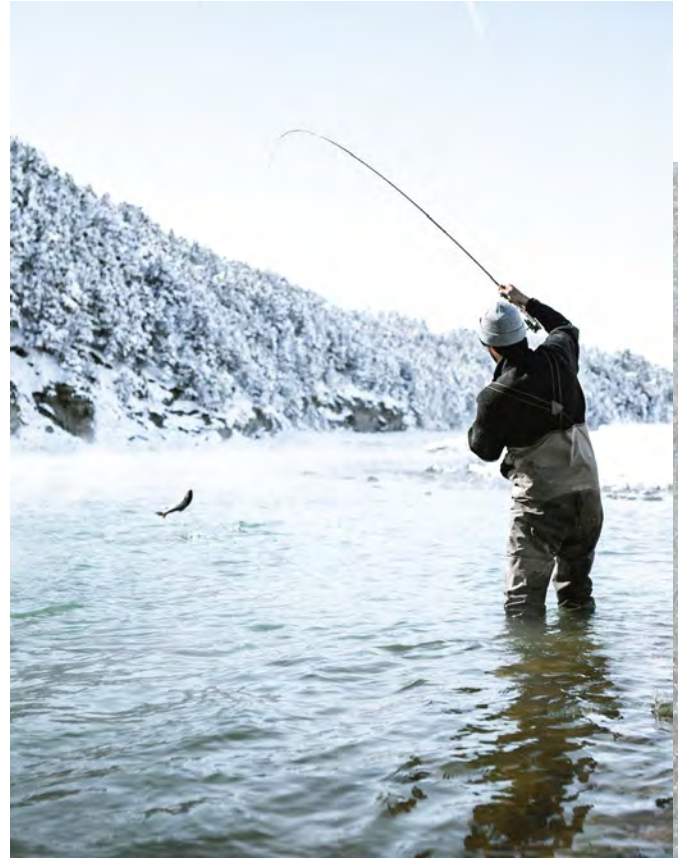

# BAMBOO STRONG

Liberty has become the leader in bamboo ski construction over the last 2 decades, and we continue to bring innovation to every product in our line. Put a Liberty ski on snow and you will feel the difference.

Moso bamboo is one of the fastest growing plants on earth. Although giant bamboo is really a grass, it functions like an old-growth hardwood in our skis, but with better resilience and a much shorter growth cycle. In fact, with a growth rate of up to 1 meter per day, bamboo can be harvested in only 3-5 years (versus 50 years for many hardwoods), with the canopy and root system intact, allowing it to absorb more carbon than is released during processing. Further, the unique feel of bamboo, combined with high tech materials like carbon fiber and vertical metal alloy, allow Liberty to craft exceptionally responsive skis that are strong and light.

LIBERTY SKIS 2023

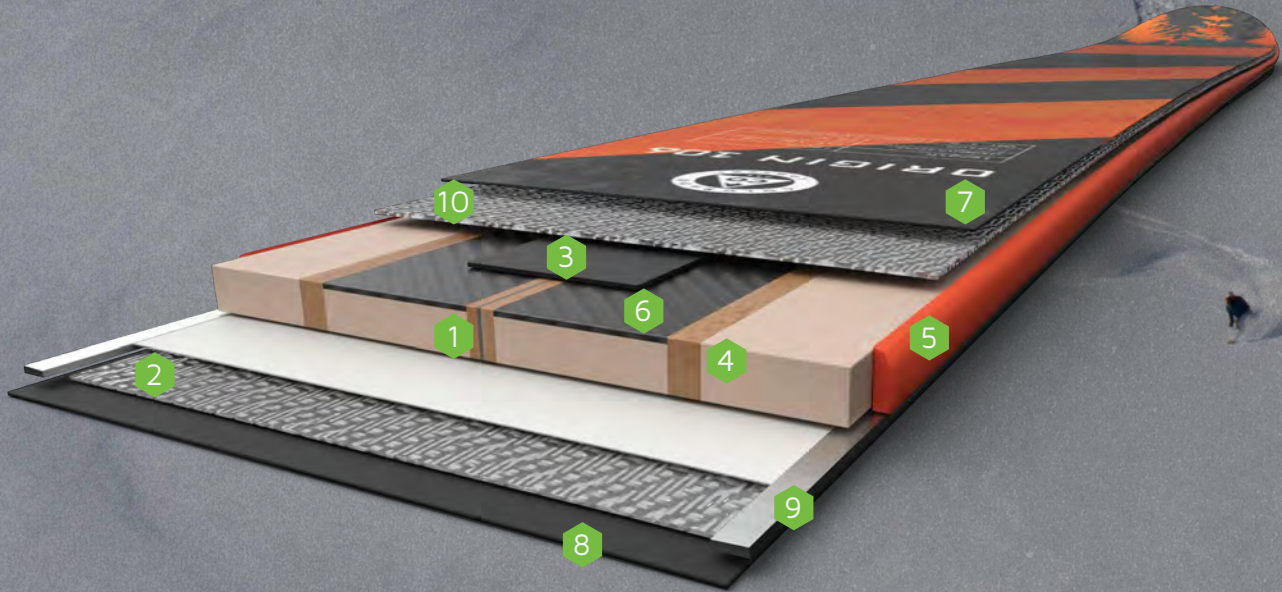

## TECHNOLOGY AT THE CORE

For a small company, Liberty consistently brings innovative technology to market in a way no other independent brand can. With our focus on functional innovation, every new design or material has to add to the way our skis behave on snow, not just marketing hype. In addition to our signature use of bamboo, carbon fiber, and poured polyurethane, Liberty developed and perfected Vertical Metal Technology®.

VMT® uses thin vertical strips of metal alloy sandwiched between our hand-selected bamboo stringers and poplar wood. With the addition of pre-cured carbon fiber strips along the top of the core and poured polyurethane sidewalls, the result is a damp, light, and powerful ride in any snow conditions.

*VMT® is a way to harness the power and stability of metal without the weight and clunkiness of traditional metal sandwich construction.*

# VMT 1.0

## VERTICAL METAL TECHNOLOGY

- 1 One central metal strut sandwiched between bamboo stringers
- 2 Full wrap triaxial S-glass
- 3 Rabbeted FRP mounting plate
- 4 Bamboo, poplar, and paulownia core
- 5 Poured polyurethane sidewalls (PU)
- 6 Pre-cured carbon fiber stringers
- 7 Coextruded dye sublimated top sheet
- 8 Sintered P-tex base
- 9 Full wrap HRC 48 German steel edges
- 10 Rubber foil

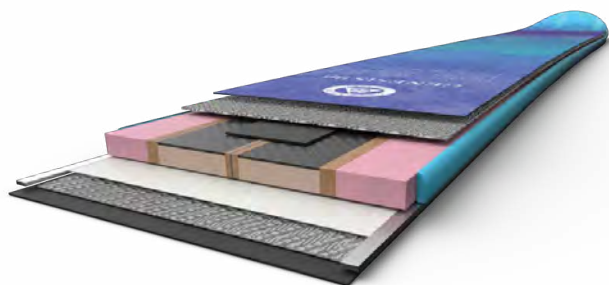

## VMT 1.0 CORE

**About**  
VMT 1.0® combines our signature bamboo and poplar wood core, a central aluminum alloy strut and precured carbon fiber strips on top to help maintain directional stability and torsional rigidity.

- Key Features**
- One central aluminum alloy strut sandwiched between bamboo stringers.
- Found In**
- Origin Series

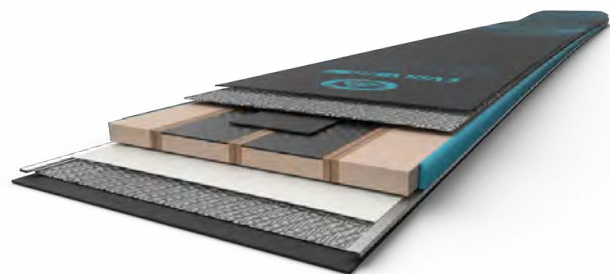

## VMT 1.0 W CORE

**About**  
Tailored Specifically for women, VMT 1.0 W® adds paulownia to the bamboo and poplar wood for a lighter more compliant ride, while maintaining the inherent power and stability of aluminum alloy and carbon fiber.

- Key Features**
- One central aluminum alloy strut sandwiched between bamboo stringers.
  - Addition of paulownia in construction.
- Found in**
- Genesis Series

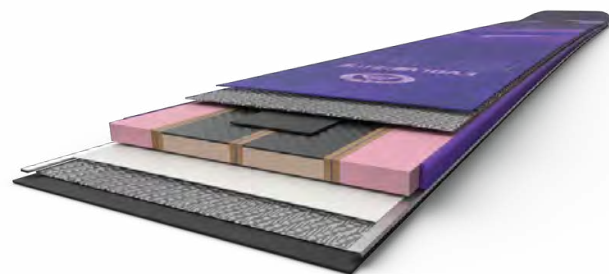

## VMT 3.0 CORE

**About**  
VMT 3.0® takes our successful vertical metal core technology two steps further by adding two additional aluminum alloy struts on either side of the center strut. This creates a precise, quiet ride, that is light and nimble in difficult conditions.

- Key Features**
- Three central aluminum alloy struts sandwiched between bamboo stringers.
- Found In**
- Evolv Series

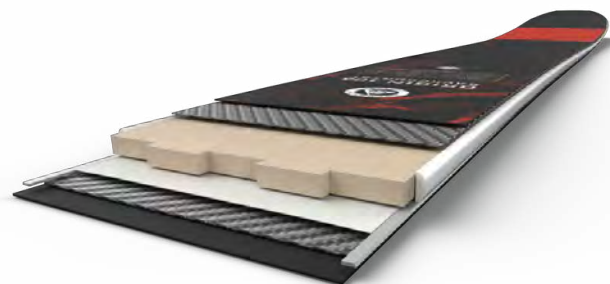

## VMT 3.0 W CORE

**About**  
Tailored specifically for women, VMT3.0 W® includes the same two additional aluminum alloy struts and pre-cured carbon fiber as well as lightweight paulownia in place of the outer layers of poplar wood.

- Key Features**
- Three aluminum alloy struts sandwiched between bamboo stringers.
  - Addition of paulownia in construction.
- Found in**
- Evolv Series

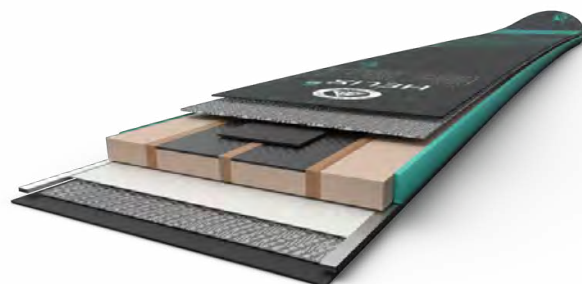

## BACKCOUNTRY CORE

**About**  
Backcountry Core features lightweight aspen with carbon fiber as reinforcement to keep it light and predictable.

- Key Features**
- Lightweight aspen with carbon fiber
- Found In**
- BC Series

## SPEEDCORE CARBON

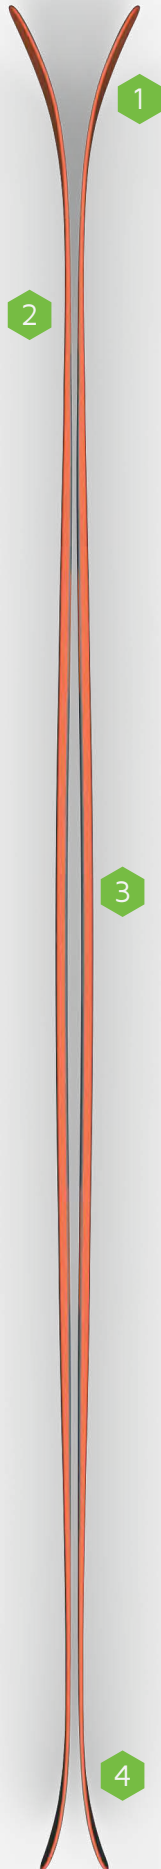

**About**  
Speedcore Carbon is our time-tested bamboo, poplar, and carbon core that is light, strong, and responsive.

- Key Features**
- Full length pre-cured carbon fiber reinforcement
- Found in**
- Helix Series

# ROCKER PROFILES

- 1 Early rise in tip and tail
- 2 Contact point
- 3 Camber underfoot
- 4 Lifted tail

# BOMB ROCKER

Effective Turning Edge: 65%  
Tip Rocker: 20%  
Tail Rocker: 15%

Incorporates tip and tail rocker with positive camber underfoot for maximum floatation and playful feel, while maintaining hard-snow performance.

# HAMMER ROCKER

Effective Turning Edge: 85%  
Tip Rocker: 15%

Hammer Rocker comes armed with an early-rise tip and camber back to the tail for powerful edge grip and precise turn shape.

# STEALTH ROCKER

Effective Turning Edge: 85%  
Tip Rocker: 10%  
Tail Rocker: 5%

Stealth Rocker utilizes a long, low tip rocker and camber under foot and a flat tail for easy turn initiation without sacrificing edge grip and liveliness.

# BACKCOUNTRY ROCKER

Effective Turning Edge: 75%  
Tip Rocker: 20%  
Tail Rocker: 5%

Similar to our Bomb Rocker, Backcountry Rocker is playful and energetic in a variety of snow conditions with reduced tail kick and rise to allow for skin clip application and to use the skis for snow anchors.

# CLASSIC CAMBER

Effective Turning Edge: 90%  
Tip Rocker: 5%  
Tail Rocker: 5%

Classic Camber creates tip and tail pressure for maximum edge grip and energy.

# ORIGIN SERIES

The Origin series hungers for adventure—with a huge sweet spot so you'll always be on your game. Do you take having fun seriously? The Origin is your ski.

The Origin is the ultimate for big-mountain adventures. It's friendly and playful in the soft stuff, but VMT 1.0® gives it the teeth to bite when you need it to. Surf, slash, smear, or carve—this ski has the supreme versatility and ease to be your daily driver. Each waist width is designed with a custom rocker profile to give you freedom of expression, so you can ski every line in your signature style.

# ORIGIN 96

LIBERTY SKIS 2023

## ABOUT

The Origin 96 excels at providing confident edging in varied conditions while still retaining a playful personality on hardpack and looser snow alike. With a refined early-rise tip profile and VMT 1.0® added to our proven bamboo, poplar, and carbon fiber core, the Origin 96 is a one-ski quiver from east to west.

## SPECIFICATIONS

Sizes	171cm, 176cm, 182cm, 187cm
Dimensions	130-96-118 @176cm
Radius	17.5m @176cm
Weight	1830g @176cm
Core	VMT 1.0®
Rocker	Bomb Rocker

## ORIGIN 101

### ABOUT

The Origin 101 has the perfect width to take on whatever the day brings. With VMT 1.0® construction and PU sidewalls, the 101 can carve up the frontside and jump into the back with confidence. With the nimbleness of a narrower ski and enough float to smooth out snowy days, the new Origin 101 is your ticket to ride on any mountain.

### SPECIFICATIONS

Sizes	171cm, 176cm, 182cm, 187cm
Dimensions	135-101-123 @182cm
Radius	19.5m @182cm
Weight	1925g @182cm
Core	VMT 1.0®
Rocker	Bomb Rocker

## ORIGIN 106

### ABOUT

The Origin 106 is the reference in versatile big mountain skis. How could we improve on the performance of this lightweight, bamboo, poplar, and carbon fiber classic? By adding VMT 1.0® and poured polyurethane sidewalls, the Origin 106 is now even smoother and more capable on hard snow. The best ski in its class just got better.

### SPECIFICATIONS

Sizes	171cm, 176cm, 182cm, 187cm
Dimensions	138-106-128 @182cm
Radius	20m @182cm
Weight	1980g @182cm
Core	VMT 1.0®
Rocker	Bomb Rocker

## ORIGIN 112

### ABOUT

The Origin 112 takes the best of the Origin 106 to a bigger platform for deeper days. Now with PU sidewalls and VMT 1.0® in the core for the guts to land airs or charge big lines, the 112 still has enough tip and tail rocker to keep things fun and surfy. The Origin 112 is ready to elevate your game.

### SPECIFICATIONS

Sizes	176cm, 184cm, 192cm
Dimensions	144-112-132 @184cm
Radius	21.5m @184cm
Weight	2150g @184cm
Core	VMT 1.0®
Rocker	Bomb Rocker

# GENESIS SERIES

The Genesis craves powdery bowls, groomed runs, and sneaky shots through the trees. Its shape and light weight reward finesse—and never condescends.

Ladies, meet your vehicle of joy. Because we know women deserve every bit of the performance the men do, the Genesis is built with a lightweight, wood core and VMT 1.0®, a vertical metal layer that will stand up to whatever you give it. It's a little looser, a little more playful, and really into having fun. Because last we checked, that's the whole point.

LIBERTY SKIS 2023

# GENESIS

# GENESIS 90

# GENESIS 96

# GENESIS 101

LIBERTY SKIS 2023

## ABOUT

We took the Genesis 90 to the next level with VMT 1.0W® in the core and poured PU sidewalls. The outcome is a freeride ski that has more horsepower for negotiating chop or a hard groomer, but still maintains a forgiving personality. Give the newly constructed Genesis 90 a try on your next ski getaway, and you will become a believer.

## SPECIFICATIONS

Sizes	151cm, 158cm, 165cm
Dimensions	126-90-112 @158cm
Radius	13m @158cm
Weight	1585g @158cm
Core	VMT 1.0W®
Rocker	Bomb Rocker

## ABOUT

The most popular waist width in our women's freeride category, the Genesis 96 now features overhauled construction with VMT 1.0W® and PU sidewalls. The award winning shape remains, and with a new higher-performance core, the Genesis 96 has become even more versatile without losing its signature light and fun feel.

## SPECIFICATIONS

Sizes	151cm, 158cm, 165cm, 171cm
Dimensions	130-96-117 @158cm
Radius	14m @158cm
Weight	1600g @158cm
Core	VMT 1.0W®
Rocker	Bomb Rocker

## ABOUT

Our newest addition to the Genesis women's freeride line-up hits the all-mountain sweet spot. The Genesis 101 comes packed with bamboo, poplar, paulownia, VMT 1.0W®, and carbon fiber to create a smooth and consistent ride. The Genesis 101 is that one ski quiver for everything the mountain has to offer.

## SPECIFICATIONS

Sizes	151cm, 156cm, 165cm, 171cm
Dimensions	135-101-122 @165cm
Radius	14m @158cm
Weight	1705g @165cm
Core	VMT 1.0W®
Rocker	Bomb Rocker

# GENESIS 106

## ABOUT

The Genesis 106 excels in deeper conditions, thanks to ample tip rocker and a 106mm waist. Designed for adventurous women who want to explore the entire mountain from front-side to backcountry. Now you can take on a powder day and have the confidence and edge grip to finish the day as strong as you started it.

## SPECIFICATIONS

Sizes	157cm, 164cm, 171cm
Dimensions	138-106-128 @164cm
Radius	15m @164cm
Weight	1725g @164cm
Core	VMT 1.0W®
Rocker	Bomb Rocker

# BACKCOUNTRY SERIES

Finally, a backcountry ski light enough to haul to the summit and strong enough to rip the descent. Enter Liberty's first ever backcountry freeride ski.

The war between tourability and skiability is over: Our new Origin Backcountry is the best of both worlds. Built with aspen and carbon fiber, at a powder-loving 106 waist, this is a lightweight explorer with unsurpassed stability on the descent.

A wide, rockered tip begs for fresh tracks and a flat, skin friendly tail makes sure your skins stay put. (We make them in Canada, too—the Liberty team north of the border knows their backcountry gear.)

LIBERTY SKIS 2023

# ORIGIN 106 BACKCOUNTRY

# GENESIS 106 BACKCOUNTRY

LIBERTY SKIS 2023

## ABOUT

Without compromising the all-mountain performance of the Origin design, we shaved off crucial grams with the use of an aspen/carbon fiber core, partial metal edge, and a skin-friendly tail insert. Less tail rocker means more effective edge in critical terrain, the ability to create snow anchors, and better climbing skin compatibility.

## ABOUT

The Genesis 106 BC takes our award winning women's freeride design and combines it with ultralight materials. By utilizing carbon fiber throughout the ski with an aspen core, it boasts liveliness and control while saving weight, so it's easy on the skin track. And with the proven Genesis shape, this ski is a worthy partner when you point them downhill.

## SPECIFICATIONS

Sizes	171cm, 176cm, 182cm, 187cm
Dimensions	138-106-128 @182cm

# EVOLV

# EVOLV SERIES

We know that even in the powderiest of places, hard snow still happens. That's where the Evolv comes in. This versatile, directional all-mountain ski always has your back.

The Evolv always knows where the fall line is and yearns to dive straight down it. The more traditional build with VMT 3.0® begs to be driven hard—but it's patient enough to let you hold the wheel. Rockered tips usher you into turns instantly, and the flat tail won't finish your carve until it's good and done. Corduroy for breakfast, chalky steeps for lunch, and bumps for dessert? Yes, please.

# EVOLV 84

# EVOLV 90

# EVOLV 100

LIBERTY SKIS 2023

## ABOUT

The Evolv 84 features a flat tail helping finish turns with authority, while the more compliant tip leads the skier into turns easily. Quick and powerful thanks to VMT 3.0® construction, the Evolv 84 is the right ski for skiers who want frontside performance with the ability to mix things up in variable terrain.

## SPECIFICATIONS

Sizes	165cm, 172cm, 179cm, 186cm
Dimensions	126-84-110 @172cm
Radius	16m @172cm
Weight	1725g @172cm
Core	VMT 3.0®
Rocker	Hammer Rocker

## ABOUT

If you want the best of carving precision and freeride fun in a versatile waist width, the Evolv 90 is for you. Now with our VMT 3.0® core and paired with super damp poured polyurethane sidewalls, the Evolv90 will fit a wide range of skier abilities and snow conditions.

## SPECIFICATIONS

Sizes	165cm, 172cm, 179cm, 186cm
Dimensions	132-90-114 @179cm
Radius	18.5m @179cm
Weight	1860g @179cm
Core	VMT 3.0®
Rocker	Hammer Rocker

## ABOUT

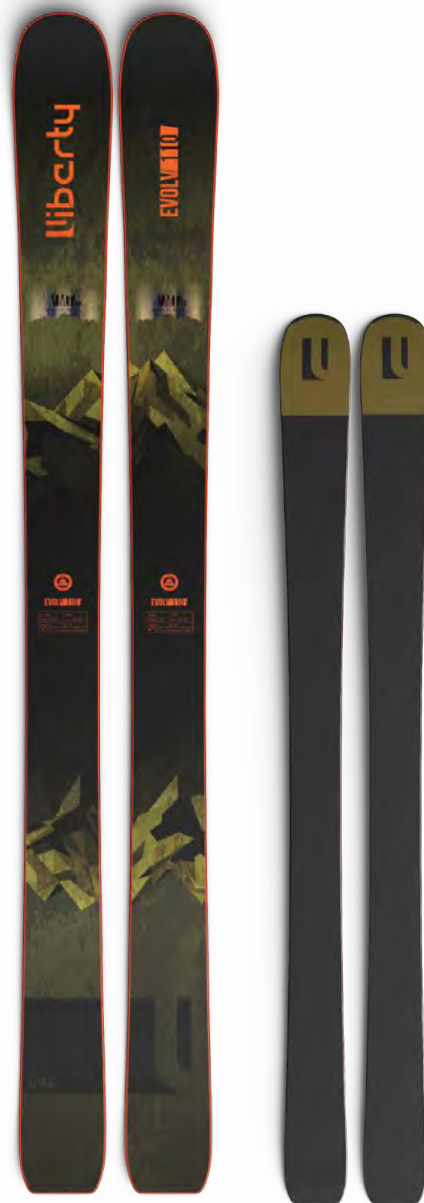

The ideal shape and powerful construction to take on bigger mountains and more snow, the Evolv 100, with integrated VMT 3.0® technology, positions itself perfectly for the adventurous, all-terrain skier. Whether looking for fresh snow, a little tree skiing, or laying down beautiful arcs on groomers, the Evolv 100 has you covered.

## SPECIFICATIONS

Sizes	172cm, 179cm, 186cm
Dimensions	139-100-122 @179cm
Radius	19m @179cm
Weight	1930g @179cm
Core	VMT 3.0®
Rocker	Hammer Rocker

# EVOLV 110

LIBERTY SKIS 2023

## ABOUT

The Evolv 110 is a powder ski with the heart of a race ski. The VMT 3.0® core creates tons of power in this wider platform and the poured polyurethane sidewalls and tip rocker help keep it under control. If your mission is to charge everything, the Evolv 110 has your back.

## SPECIFICATIONS

Sizes	179cm, 186cm
Dimensions	144-110-128 @179cm
Radius	21m @179cm
Weight	1948g @179cm
Core	VMT 3.0®
Rocker	Hammer Rocker

# EVOLV WOMEN'S SERIES

The Evolv W is a lighter weight, directional all-mountain tool that does it all. The traditional build keeps it tight—and charges hard through whatever comes your way.

Your skis should have the same strength-to-weight ratio you do—which is why the Evolv is the ultimate all-mountain tool for women. A lighter weight wood core makes it easy to tip and rip, while VMT 3.0® makes it stiff enough to really give 'er. Set-up crud? Bulletproof hardpack? No matter. The Evolv W's confidence is unflappable.

LIBERTY SKIS 2023

## EVOLV 84w

## EVOLV 90w

# EVOLV WOMENS

LIBERTY SKIS 2023

### ABOUT

With a shape lives for groomer days, but can explore the entire mountain, the Evolv 84w is ready for any resort adventure. Poured polyurethane sidewalls and VMT 3.0W® (our women's specific core infused with carbon fiber) give this ski its signature feel. Step into the new Evolv 84w ski and search for the perfect turn.

### SPECIFICATIONS

Sizes	151cm, 158cm, 165cm
Dimensions	128-84-110 @158cm
Radius	13m @158cm
Weight	1400g @158cm
Core	VMT 3.0W®
Rocker	Hammer Rocker

### ABOUT

The Evolv 90w is our most versatile all-mountain ski for women. With VMT 3.0W® and poured polyurethane sidewalls it remains lively and quick, with enough width to create a predictable platform in any type of snow. If you want a performance ski to carve turns anywhere on the mountain, the smooth and confident Evolv 90w is the perfect match.

Rocker	Hammer Rocker

# HELIX 84 JR

# HELIX 88

# HELIX 98

LIBERTY SKIS 2023

## ABOUT

The Helix 84 is a high performance freeride ski for smaller riders. We took the same freestyle all-mountain DNA from the Helix 88 and shrunk it down to create a versatile, easy to maneuver ski that will rip high speed carves on icy groomers as well as throw tricks in the park and surf through pow.

## ABOUT

From World Cup podiums to Olympic venues, the Helix 88 has the progressive shape and solid construction high level riders demand while also doubling as a truly capable, all-mountain twin tip. The symmetrical shape, paired with lightweight bamboo, poplar, and carbon fiber, creates a durable and energetic twin-tip you can take anywhere.

## ABOUT

Regardless of the terrain, the Helix 98 will deliver the fun. The wider platform, combined with an innovative shape and flex, provides a versatile, energetic, and stable ski. Featuring our Liberty exclusive bamboo, poplar, and carbon core gives the ski a unique flex pattern that keeps it playful in the tips and tails but stable and predictable underfoot.

## SPECIFICATIONS

Sizes	138cm, 148cm, 158cm

Rocker	Stealth Rocker

# HELIX SERIES

This ski likes to party. Stomp big airs, slide rails, and trench perfect arcs—the Helix slides eagerly and playfully from park to piste.

The Helix is a nimble minx, built for balance in the air and on the snow. It's snappy and energetic, bounding from edge to edge with just a tip of your ankle. A new full-length carbon fiber layer adds more strength without weight, nearly symmetrical dimensions and twin tips make for perfect spins and switch landings, and tip and tail protectors and polyurethane sidewalls take a beating. Welcome to your quiver of one.
